Our Services in Cyber Security domain:

- **Information Security Trainings and insights from global cyber leaders**
- **Affordable Cyber Security and Privacy Solutions**
- **Cyber Auditing & Vulnerability and Threat Assessment**

We have developed a unique training arena for financial organizations, critical infrastructure and manufacturing companies that prepares client's employees for responding and fending off real-time cyber-attacks on complex, wide-spread systems.

Our training provides a realistic, perfectly emulated cyber environment, tailored to simulate specific technological environment and settings. The training can be customized for any technological environment, and the attacks generated in the arena by the red team are geared to challenge your teams according to the level of the defenders.

This life-like experience raises the awareness and battle readiness of every member of the organization in accordance with their relative responsibilities and day to day activities. Repetitive training sessions hone your team's responses and ensure that they will be at their best during real attacks on your facility.

We provide time-proven methodology for cyber security and information, standard and guideline-based, information risk assessment. We will evaluate the environment to test its vulnerability to various attacks according the body of threats encountered by your organization. The risk assessment process offers insight and understanding of business processes, business impact, supporting technologies, system dependencies, threats, vulnerabilities and risks within the environment. Based on this information, installed controls will be assessed and security issues and gaps will be identified. The results of the risk assessment will provide the input for selecting appropriate controls or measures for risk mitigation and also determine prioritization of the remediation. This risk assessment lays the basis for a continuous risk management process.

Our Auditing & Risk Assessment allows effective virtualization and simulation of complete engineering and operational processes, providing a unique opportunity to customize technological and security solutions according to your organization's specific and exact parameters. Assessments will be conducted on site or at a QA simulation environment, in which technological and/or security solutions can be emulated, tested and evaluated before they are implemented in the production environment.

Our products and solutions include protection or defending the use of cyberspace from cyber-attacks tailor made for the specific organization fit in accordance to the organization structure, culture and environment.. Cyber risks have the ability to affect an organization's bottom line. And the impacts can be costly, compromising to the clients and their confidence. Trinity will provide the guide to mitigate cybersecurity risks. The service will follow standards that has been decided by the experts and officials as method to fight cyber security. More So, we believe our products and service would provide a competitive advantage to the organization under the present scenario.
