Current Situation: New Expectations

IIGs serves as an internet gateway for routing International incoming and outgoing Internet based data traffic. Including Bangladesh with no exception, internet traffic experiencing geometrical growth and by and large, Asia is leading the way.

As an International Internet Gateway Operator (globally termed as IP Transit Provider), Level3 Carrier Ltd. provides ISPs, BWA & mainly the Mobile/3G Operators with a strong and comprehensive internet back bone for them to generate revenues from content and delight their customers with an immersive digital experience.

We are focused on the fact that the demand for dependable, high capacity, Global IP Transit is growing faster than ever. And it will continue to grow, driven not just by more computers, mobile phones and tablets, but also by increasing take-up in rapidly evolving markets.

For some time, there have been more devices connected to the internet than there are people on our soil. Now more of our country's population is discovering, using, and making more connections to the internet.

We also concentrated to improve our presence in the other sector like Software Development, IT enable services, out sourcing and implementation business.

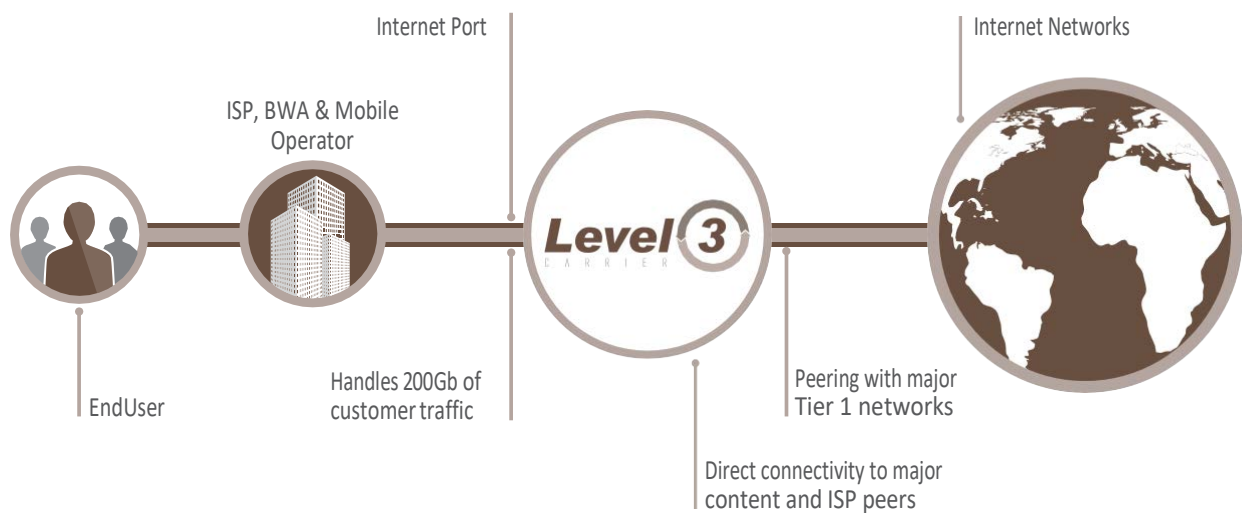

Level3 management believes in the spirit to reach to the peak in terms of achieving the goals, by taking along with their customers, they prefer calling them truly partners. Level3 Carrier is focused on its performance and there they take pride in having their management of professionals of long experience and articulated skill in the field of business, particularly in telecommunication.
