The Team:

TECHNOLEAD team is a group of young, dynamic and highly motivated professionals. We combine excellence with top quality, integrity and timeliness to deliver a service that is technically state-of-the-art, designed to facilitate your user experience and cutting edge in terms of content and tools.

Our philosophy is to fulfill our customer requirements to an optimum with respect to functionality, quality and ease of operation.

Working very closely to our customers is the basis for our work. We hope to continue to put our backgrounds and qualifications to use to provide you with the leading lifestyle engineering solution.

Completely Integrated Solutions means a higher ROI through integration of the three performance dimensions: horizontal throughout the production process, vertical over all levels of the enterprise, and chronological throughout the entire life.

Quality Control:

It is quality driven company and targeting customers that appreciate quality.

Our philosophy is to fulfill our customer requirements to an optimum, with respect to functionality, quality and ease of operation. Working very closely with our customers is the basis for our success.

Quality ranges:

Supplying Automation Products and Engineering Solutions for Software and Hardware Systems Including Analysis, Consultation, Design, Implementation and Technical Support

BD TECH SERVICES LTD. means different things to different people:

- Industry Leadership
- Dynamic Associates
- Solutions Provider
- Technology Expert

We think a good business partner has all of these qualities.

BTS is People

One of **BD TECH SERVICES**'s most valuable assets is the dedication of its associates. We believe in our people and their potential, so we invest in their success. Our ability to attract and retain quality associates who deliver exceptional customer service means we are better at understanding our clients' business and their unique characteristics.

BTS is Solutions

Everybody is looking for the right solutions to their unique business challenges.

These solutions need to complement your operating strengths. They need to be integrated, open, and flexible. They should improve quality and control. And they should leverage innovative technology to increase efficiency and strengthen customer relationships. You can find these solutions at **BD TECH SERVICES**.

BTS is Technology

BTS's products and services are enhanced by the integration of advanced technology and e-commerce solutions.

Get an Edge with BTS

At BTS ; we strive to give our clients a competitive edge through:

- Industry Experience
- Dedicated People
- Integrated Solutions
- Innovative Technology

Consulting & Technology Services - Transforming business through innovation leveraging Information Technologies

BD Tech Services Ltd. Consulting & Technology Services help clients deliver innovation to their customers and improve cost and effectiveness by leveraging Information Technologies. We provide advisory services and expertise so that our clients keep control of their processes and projects, can customize as much as required by directly managing the resources provided, and keep ownership of their assets and systems. Our three practices: Business Innovation, Operational Excellence and IT Leadership offer a range of cost effective transformation and innovative solutions tailored to each industry-sector.

Systems Integration - Delivering seamless business systems

We have a strong portfolio of Systems Integration offerings to provide increased added value for clients, as well as a source of better growth and profitability. Our enhanced distributed delivery model has quality, scalability, predictability and flexibility at low price point, and we have a strong near shore and offshore presence. We continue to adapt our existing portfolio to cater for the increasing demand for Software-as-a-Service.

Managed Services - Transforming IT infrastructure and business operations

As the undisputed leader in Managed Services, we are one of the few companies that can provide all the “design, build and operate” elements of a complete outsourcing solution. We manage and transform all the IT operations of our clients, including the management of their entire information and data processing systems.

High-Tech Transactional Services - Advancing business strategy through innovative processing solutions

Through our BD Tech Services Ltd., we specialize e-Services for Customers, Citizens and Communities, and financial markets. With the BD Tech Services Ltd., we will focus on offering smart energy solutions around production, transport, distribution and retail, to enable energy efficiencies and increase sustainability, while improving operational performance.

HOW IT WORKS:

BD TECH SERVICES LTD. has gained expertise in delivering not only quick turnaround IT Solutions but also large IT solutions. In doing so, its delivery methodology has evolved incorporating the best-of-breed tools and techniques. Experience ranging from legacy systems to state-of-the-art object oriented systems as well as from highly integrated enterprise applications to consumer oriented internet applications has given BD TECH SERVICES LTD. the unique ability to evaluate and select the best tools and technology.

A use case is a piece of functionality in the system that gives a particular user of the system (actor) a result of some value. Use cases are used to capture functional requirements. In the context of IT life cycle, use-case driven means that the use cases are used as a primary artifact for establishing the desired behavior of the system and for communicating this behavior among the stakeholders of the system. It also means that use cases are the primary input to the analysis, design and validation of the systems architecture.

Architecture-centric here means that the systems architecture is used as a primary artifact for conceptualizing, constructing, managing and evolving the system under development.

The iterative process involves managing a number of releases rather than one big release at the end of the project. Incremental refers to the fact that each release will add new features to the previous release.

Requirement Analysis

BD TECH SERVICES LTD. team provides comprehensive set of features after conducting a detailed analysis of clients requirements. Activities include Identify actors and use cases and Prioritize the use cases.

Functional Specifications

Detailed specifications of the system are developed during this stage. The use cases identified in the requirement analysis phase are fleshed out by detailing the normal, alternate and exceptional flow of use cases and accompanied by the GUIs associated with the use cases, if any. Activities include Detail a use-case, Prototype user interface and Architectural Analysis and Design.

Application Design

The software design phase involves developing the Class diagram for all objects in the system. During this stage the states and methods of each class will be defined. Activities include Develop the Analysis Model and Develop the Design model (class and object diagrams)

Software Development

Software development of each use case is carried out. The coding standards for naming variables and handling errors have been developed and are strictly adhered to. This ensures consistent and superior quality of coding. Activities include Develop the code, Unit Test the code, Integrate with other modules and Integration Test the code.

Quality Assurance

In order to ensure the Quality of the product, The QA team is involved from the very start of the project. Each deliverable is reviewed against the requirements and once the QA team approves the quality only then the deliverable is released for submission to the client.

Support Acceptance Testing

The onsite team provides support to the customer during the acceptance testing process. If there is any re-work required the onsite team decides whether it can be carried out onsite or it has to be sent back to the offsite development team. The regular change management process is followed.

Training and Documentation

Training is conducted not only for the relevant end users but also for the IS staff as well. End-user documentation is also produced. The documentation is produced in conjunction with the business usage of the system.

Deployment

The Onsite team collaborates with the customers team to deploy the software and move it into production.

Post Production Support

During this phase, if any issues are reported, the onsite team member provides support in analyzing and resolving the issue.

Our Work Details Are Listed Below:

IT Services

- Application Development & Maintenance
- Data Management
- Package implementation and support
- System Integration
- IT Consulting
- IT Training
- Server Services
- Data Center Design and implementation
- Infrastructure Solutions
- Network Integration and Consulting
- Disaster recovery Solutions
- Unified Communication System Design and Solutions

- DBA Services
- Product Enhancement
- Migration and Re-engineering
- IP Surveillance
- Microsoft solutions.
- Sound System.
- Printer, Photocopier Toner
- Printer, Photocopier, UPS Repair

Application Domain

Network Resource management for Telecom Operators
Embedded System Development
Audio video streaming for Telecom and Security industry
Enterprise Resource Planning
Data migration for CRM application
Microsoft Exchange & SharePoint
Enterprise Asset and Maintenance Management

Technologies:

Internet Programming Languages

ASP, ASP.NET, VB.Net, C#, PHP, JavaScript, VBScript, JScript, ActiveScript (Flash)
