## **I. EXECUTIVE SUMMARY**

A connected world allows people and businesses to create, process, share and distribute information in innovative ways. New inventions continue to arrive at a high speed. This imposes requirements on the availability, integrity and confidentiality of the information.

One of the greatest threats to information security could actually come from within your company or organization. Inside 'attacks/fraud' have been noted to be some of the most dangerous since these people are already quite familiar with the infrastructure.

The focus will be on uninformed users who can do harm to your network by visiting websites infected with malware, responding to phishing e-mails, storing their login information in an unsecured location, or even giving out sensitive information over the phone when exposed to social engineering.

One of the best ways to make sure company employees will not make costly errors in regard to information security/ committed fraud /compliance is to institute company-wide

### **a) Comprehensive Information System Assessment**

Information System Assessment gives independent, neutral as well as exact situation of the organization's FINANCIAL LOSS / ROI to its stakeholders through comprehensive assessment

### **b) Vulnerability Assessment & Penetration testing**

Information security Audit/pentest gives independent, neutral as well as exact Situation of Organization's security attack vulnerability (hacking possibilities) and remedy recommendation to its stake holders.

### **C) Companywide Information Security-awareness Workshop.**

Awareness workshop helps company employees from becoming a victim & IT professional to protect company critical asset from internal and external attack /fraud
