Company Overview

rajIT is comprised of experienced and talented professionals who have extensive information technology and business management experience. We at raj IT are dedicated in providing the highest quality of services enabling the growth of our customers and our business partners with the right solutions every day.

Working with us means that business can spend more time on the things it does best and less time worrying about systems. We respond rapidly to change and use change as an opportunity to innovate. We offer strategies and solutions that help our clients streamline IT processes and structure, accelerate delivery of technology and IT value, and reduce IT costs.

Our value to our clients is based on a high level of commitment and dedication to help our clients succeed by developing a keen understanding of their business environment as well as their system needs. Our aim is to build our reputation by our personal integrity and honesty as well as professional competency.

We add value through technology by providing innovative solutions that help clients to generate more profit from the opportunities of an interconnected digital world. We have a strong understanding of integrating multiple technologies into the workplace. Our methodology helps our clients to identify competitive business opportunities in their key markets and formulate specific strategies and action plans that integrate with technology, customers, and vendors.

We have more than 30 years of accumulated experience in Oracle Database and Application Administration, System Designing and Administration (Unix, Linux, Windows), Network Administration, Application Development (using .NET, C#, PHP, Java, VB etc), Database Development in Oracle, MS SQL and MYSQL and Website Development.

The members of our courteous and expert support staff are renowned for their professionalism and competence. We endeavor to provide critical tech support in a timely, attentive manner.

Methodology

In developing an application, we at Raj IT adhere to the international standards to make the project flow easy and transparent for the client.

- Inception
- Requirement Management
- Solution Development
- Integration
- Quality Management

Inception

This is when the initial requirements collection takes place – our team will carefully study your requirements to prepare a comprehensive proposal. You don't have to provide us with structured documentation. Just let us know your thoughts and expectations and our specialists will work on defining all the details by asking you some questions and offering our ideas on your project. The proposal is free for you and has no obligations.

Requirements Management

At this stage we will clearly describe your requirements in project documentation. Our specialists will prepare a proposal describing the product's performance, technologies, design, features, verification requirements, etc. as well as the estimation of workload and cost of the project.

Solution Development

The solution development is the crucial stage of the project where most of the programming, coding and testing takes place.

Integration

At the Integration stage we define the best possible integration sequence, integrate product components and deliver the product to the client.

Quality Management

Considering the necessity of Quality in our developed product and services, we always focus on Quality assurance for each of our service area. We have a dedicated team for Software Quality Assurance and the team is growing day by day. We want to ensure that our product is certified by our experienced SQA Engineers before handing over to client. By doing this we are saving a lot of time of our clients and gaining confidence from our clients.

Our Development team and SQA Engineers can apply a full range of tests to software throughout the full cycle of product development as part of the Quality Control and Quality Assurance processes.

Testing includes:

- Functional testing
- Load and stress testing
- Regression testing
- Unit testing
- GUI testing
- Usability testing
- Security testing
- Database testing
- Cross-platform testing
- Localization testing
- Documentation testing
