

Ishraak Solutions Limited

About Ishraak Solutions Limited

We are a software company with a special focus on Artificial Intelligence/Machine Learning. We develop web and mobile applications. We also offer professional training on Machine Learning, Deep Learning, and other software development courses.

Our team comprises experienced professionals with expertise in cutting edge technologies and state of the art engineering processes. We ensure continuous training for our team members to ensure that each of them is able to perform his/her role following the best practices of the industry. We also nurture a culture of collaboration and guidance where every team member continuously learns from others and also help others move forward with their responsibilities wherever possible.

We try our best to maintain a workplace where people work hard and have fun at the same time. Making sure to get the best out of each team member is our continuous aspiration.

Work-life balance is another area where we give extra attention. Every team member is not only an employee here he/she is also a member of a happy family. We are ready for some extra miles wherever necessary to achieve this goal.

Being a software company, we understand very well that continuously sitting in front of computers and working hard without a break is not very good for fitness. So we have a workplace where team members are able to play table tennis, etc. and gossip together while having some team to re-energize themselves for the next task in hand.

Our Process

We believe in constant innovation and improvements. We practice Agile methodology which emphasizes communication and collaboration. The agile software development emphasizes on four core values.

- Individual and team interactions over processes and tools
- Working software over comprehensive documentation
- Customer collaboration over contract negotiation
- Responding to change over following a plan

Our team is highly flexible to adapt to the constantly changing business realities. It helps us to successfully manage and accomplish the goals of our customers' projects within specific deadlines by following global standards. We diligently practice the SCRUM development method which greatly assists us to effectively manage the assigned tasks within our team-based development environment. Scrum empowers our development team and is most suitable for managing multiple projects by working in small teams. We have also adopted Test Driven Development and Continuous Integration among the different agile practices.
