Preface

"Software and IT Services Catalog 2019" is an endeavor of BASIS for addressing the much-needed information database that can assist prospective software buyers to locate right software/IT solution providers for their respective organizations.

This is the Fifth time that a comprehensive software catalog is published by BASIS. The last one was published in 2017. In 2006, BASIS published this document for the first time in history. This year, the publication comes up with larger number of entries and greater number of categories. It includes 201 products and services; all developed locally, from 79 software and ITES companies.

Detail profile of each product/service has been presented at the catalog in a structured way. Information on client benefits, specific product features, representative client list and other related facts and figures (such as total no. of clients, target industry, certification etc.). All this information is presented in a way to help the buyer understand the suitability and applicability of any particular IT solution for addressing the business need of individual organization. To help the client in judging the credibility of the solution offering company, a brief company profile has also been presented in each case.

This catalog is a result of extensive effort of BASIS research team. Information presented has been compiled in an interactive way that involved multiple rounds of consultation with the solution providing companies. No doubt, there are shortcomings and further scopes of improvements. Suggestions and feedbacks from the users of the catalog will be helpful to make future publications enriched.

BASIS would like to thank all who have come forward with their valuable contribution in publishing this catalog. BASIS is grateful to all the software and ITES companies who have provided their valuable time and effort for providing the information and also the organizations who have published advertisements at the catalog. BASIS specially thanks ICT Business Promotion Council (IBPC), Ministry of Commerce for supporting with resources for the publication and distribution of this catalog.

About BASIS

In 1997, BASIS has started its onward journey only with 18 charter members, with the Trade Organization License 428 registered under DTO of Ministry of Commerce. Today, as an association of 1135 members, BASIS is the leading trade body of the Software and IT Service Industry in Bangladesh.

Mission

To develop the ambition, capacity and sustainable growth of the BASIS member companies, and to lead and deliver the BASIS contribution to “One Bangladesh”.

Vision

To lead to the development of vibrant, sustainable and successful software and IT service industry in Bangladesh.

BASIS, through its regular programs and activities, works with the following broad objectives.

- **Domestic market development** by creating awareness among potential IT users from both private and public sectors, establishing market places for IT solutions and ensuring level playing field for local software and ITE service industry.
- **International market development** for the local software and ITES industry through networking and business linkage events as well as brand promotion of the industry at international level.
- **Capacity building** of the member firms as well the industry as a whole through management/entrepreneurship development initiatives and technology training and resource sharing.
- **Provide services** to its members in different operational and business issues like tax, export/import, remittance, foreign visit, legal, IPR etc.
- **Advocacy** for business friendly and enabling government policies for the development of software and IT enabled service industry.
- **Contribute**, as responsible citizen group, in the long-term national vision of becoming a knowledge economy, particularly through engaging with the young generation and motivating them for becoming technology leaders of future.

Being the largest national trade body of ICT sector, BASIS has organized several significant events for the last two decades, including BASIS SOFTEXPO, BASIS National ICT Awards, NASA Space Apps Challenge, Digital World, Internet Week, Ecommerce week, BizTech B2B Conference and Outsourcing Award. Among these, BASIS took the opportunity to organize few events in collaboration with the government. ICT division and BASIS jointly organized formerly South Asia's largest ICT exposition - “Digital World” – for the three times. BASIS along with Bangladesh Bank, organized E-commerce week with in order to encourage mass people to shop online, to include business in e-commerce activities and to address the existing challenges in implementation of e-commerce. Through these market development activities, BASIS drives the country towards Digital Bangladesh by 2021. To ensure local market development, BASIS organized a premier event titled “BizTech B2B Conference” with focused & pre-registered B2B matchmaking sessions.

Apart from organizing events, BASIS contributes largely on policy reforms. BASIS played a prominent role in formulating and drafting National ICT Policy 2018, one of the most noteworthy contributions to the sector. In addition, BASIS worked closely with Government of Bangladesh in formulation of Digital Security Act 2018, ICT Act, E-commerce Policy, Outsourcing Policy and Small-Cap Stock Exchange Policy. BASIS has been contributing to National Export Policy amendment through providing recommendation related to ICT sector.

As a part of international market development, BASIS joined several outstanding global events of digital world including APICTA Awards, GITEX Technology Week in Dubai, CeBIT global event for digital business in Germany and Australia, Japan IT Week, Easy Fair in Denmark and Sweden, US-Bangladesh Tech Investment Summit in USA, Europe Bangladesh Technology Summit held in Norway & Denmark and Outsource World in New York.

Membership Growth (1997-2018)

BASIS has started the journey with 18 charter members, but today, its membership stands more than eleven hundred. The annual trend of membership number reveals exponential growth rate each year.

Certified Company

Accounting & Financial Software

ALWAYS TRIES TO MEET YOUR NEED

ACCLINE is an Integrated Accounting Software for trading, manufacturing, service and non-profit organization. ACCLINE is an open architecture system and is growing with the participation of customer. Enriched with the standard features it has the capability to integrate almost all internal and external financial transactions of an organization.

Feature of the Product

- General Ledger
- Accounts Receivables
- Accounts Payable
- Production
- Payroll

Benefits of the Product

- Instant access of information
- Speed
- Accuracy
- Cost control & savings
- Increasing efficiencies of doing business

Highlights

- Customizable
- Multi-Company, Multi-Branch/Factory/Cost center
- Web based
- Cloud / Client server
- Easy to learn, easy to operate, easy to maintain

Representative Clients

Energypac Power Generation Ltd., National Tea Co. Ltd., Delta Life Insurance Co. Ltd., GDS Chemical Bangladesh (Pvt.) Ltd., Meghna Life Insurance Co. Ltd., Sunlife Insurance Co. Ltd., Sunflower Insurance Co. Ltd., Aramit Group, KSK Global Ltd., Project Builders Ltd.

Number of Installations/Clients: 110

AccLine can meet almost 80% needs of any organization. From our experience, having capability to adopt new features and customized requirements AccLine is dynamic for day-to-day operations of an organization - we are happy with it since 2003.

– **Quamrul Mohammed Manjur**, General Manager
GDS Chemical Bangladesh (Pvt.) Ltd.

Data Head Pvt. Ltd.

From its inception in 2000, Data Head Pvt. Ltd. has its major works in developing generalized and customized software. The main product brand ACCLINE is covering major features of an ERP. Along with the product and solution development Data Head provides IT Consultancy, Mobile app, System Integration, Software Implementation and Support services and IOT solutions.

Accelerate your business in the cloud

OneBook delivers adaptable cloud technology with a unique all-inclusive user licensing model, enabling a complete, real time view of businesses anytime, anywhere. It gives small and small medium organizations full control over current and future costs. OneBook provides the full suite of integrated business management applications which Streamlining different processes and workflows that prompts efficiency and productivity levels of an organization. Intelligent reporting and analytics will indicate the total growth of business and enable instant decision-making ability.

Feature of the Product

- Scalability and expandability
- Customization and vertical market specialization
- Integration with ERP Modules
- Reporting & Analytics
- Data Security

Benefits of the Product

- Overview of the company's current financial situation in real-time
- Access to information and documents from any devices
- Eliminating costs on the hardware, installation, maintenance, system administration, updating, and server failures
- Automatic updates allow the administrator spend more time on operation
- Backups and data security

Highlights

- Integrated accounting, sales, purchase and inventory
- Optimize payable process and control expenditures
- Hassle Free deployment and maintenance
- Multi-user capabilities
- Robust data security and access control

Representative Clients

Make Digital Business

Ecommerce, also known as electronic commerce or internet commerce, refers to the buying and selling of goods or services using the internet, and the transfer of money and data to execute these transactions. Ecommerce is often used to refer to the sale of physical products online, but it can also describe any kind of commercial transaction that is facilitated through the internet. Whereas e-business refers to all aspects of operating an online business, ecommerce refers specifically to the transaction of goods and services. Ecommerce has evolved to make products easier to discover and purchase through online retailers and marketplaces. Independent freelancers, small businesses, and large corporations have all benefited from ecommerce, which enables them to sell their goods and services at a scale that was not possible with traditional offline retail.

GERP

Operations and structure of government organizations are different from private commercial and industrial organizations. Hence off the shelf ERP solution which are normally designed following the standards of private industry are not compatible with government entities. As such it has been decided that a customized Government ERP will be developed from ground to meet the specific requirements of Bangladesh Government. Enterprise resource planning (ERP) is business process management software that allows an organization to use a system of integrated applications to manage the business and automate many back-office functions related to technology, services and human resources.

Feature of the Product

- Human Resources Management Module
- Budget Planning and Accounts Module
- Audit, Reporting and Information System Module
- Procurement, Inventory and Asset Management Module
- Project Monitoring and Management Module

Benefits of the Product

- Improvement in the current workflow without violating any policy or rule set forth by the government organization.
- Minimize cost by using open source platforms, database, testing tools, project management tools etc. without compromising the performance and quality of the system.
- Easy access of Information and avoid long tiring data entry.
- Better Reporting and Real time analysis.
- Easier decision making than ever.

Highlights

- A unique e-Government ERP from scratch to meet the needs of Bangladesh Government.
- Fully support the rules and regulations of the Bangladesh Government.
- Making the operations of Bangladesh Government paperless.
- Fully support the indigenous nature of work in Govt. entities.
- Ensures transparency within whole process.

Central Biometric Verification & Monitoring Platform

CBVMP

It was vital for Bangladesh Govt. through BTRC to protect the misuse of the Mobile Phone in Identification process as well as to identify the user of the mobile phone for being involved in any illegal activities using mobile phone. BTRC then introduced the Central Bio-metric Verification Monitoring Platform to map all the mobile phone users with their National ID, Driving License, Passport and Birth Certificate through Biometric Verification before any sim registration, deregistration, transfer or replacement. Synesis IT was selected to develop the CBVMP Application; procure, supply, install and integrate necessary hardware, software and connectivity to maintain CBVMP solution.

Feature of the Product

- Centralized Database System
- Clustered Database Application and mirror database
- Applications are distributed in multiple application servers using Load Balancer
- Service Oriented Architecture
- Data Center (DC) is performing as Active and Disaster Recovery (DR) as in passive mode

Benefits of the Product

- Instant and Centrally verification of NID and other identification documents
- Keeping all the data record against each NID and mobile number
- Aligning all Commercial Mobile Phone Operators (CMPO) in a single platform enabling of central platform consent (OTP) before selling or registration activity of any SIM
- Developed and Maintaining high security for public data

Highlights

- Aligning all Commercial Mobile Phone Operators (CMPO) in a single platform
- Real time data communication and population Centralized Database System
- Handling of 500 Concurrent Requests in a second
- Transaction Per Second (TPS) Controlling
- Migration of Big data more than 160 million records

Development and Implementation of an Integrated e-Bill Payment System

EkPay is a centralized e-Payment System or a P2G (People to Government) platform. The ultimate goal of the payment system is to reach 5- 'any': anybody, anywhere, anytime, any-payment and finally any- government service. This service is Providing citizens of Bangladesh the convenience of paying any utility or other bill, anywhere and anytime. Thus, reduce the TCV (Time-Cost-Visit) of the bill payment process.

Feature of the Product

- A secured payment processing platform for all public services which is facilitating collection of payments through multiple channels.
- This project covers utility bill payments such as electricity, water, gas; all education board payments, all e-filing & forms portal payments and all Digital Center payments
- Providing interoperability so that citizens can pay the bills of any service provider at a single point and facilitate payments via multiple channels i.e. Cash, Debit Cards, Credit Cards, Prepaid payment instruments including wallets and other electronic payment options etc.
- Provide an accessible bill payment system to the large segments of un-banked and under-banked population.

Benefits of the Product

- Convenience of paying any utility or other bill, anywhere and anytime.
- Provide a simpler process of bill collection for service providers/billers.
- Providing access to all possible payment points for the bill payers.
- Reducing the massive dependency on paper printing for the payment processes and record keeping.
- Provide a higher level of security and accountability to the both billers and bill payers.

Highlights

- Centralized e-Payment System
- Simpler process of bill collection for service providers/billers.
- Interoperability
- Secured payment processing platform.

Online Life Insurance System (for Jiban Bima Corporation)

Customization of Online Insurance System and Database Upgradation using latest technology.

Jiban Bima Corporation (JBC) had three tier architecture web-based integrated Insurance System Software. That was not that much efficient and up to date to serve JBC properly. Then, Jiban Bima Corporation decided to improve efficiency of the previous software and upgrade the software system. Synesis IT worked for the Customization of Online Insurance System and Database Upgradation using latest technology.

Feature of the Product

- Mobile Application for the Policy Holders, DO, DM, Agents and JBC Employee.
- Latest version of Oracle Database, Forms and Reports in Java Version 11 or latest and upper version for every module and forms.
- Customized Reports and Insurance Systems as per new requirement and policy of JBC.
- SMS Gateway, Payment Gateway, and Email Gateway etc. Integrated with the Software.
- A robust IT security framework to protect business information from unauthorized access.

Benefits of the Product

- Comprehensive documentation helps to analyze the current strength and weakness in the IT infrastructure and IT roadmap for long term visions.
- Identifies process gaps and proper mechanisms to mitigate those gaps.
- Faster and real time availability of seamless information based on user authentication and user authorization.
- Support employees of JBC to increase productivity and accountability.

Highlights

- A Central Database taking core data from existing modules (Insurance System, Accounting System, Payroll System, HRM System etc.)
- Mobile Application for Policy Holder, DO, DM, Agent and JBC employee.
- Strong security of the administrative work of JBC and privacy of the customer.
- Multiple Payment Gateway so that citizens can pay the premium via multiple channels i.e. Cash, Debit Cards, and Credit Cards, EFT, Mobile Banking etc. and from anywhere.

Postal Automation (for Bangladesh Post Office)

Postal Automation for BPO Sub-Offices

Automating office processes has helped BPO and the Sub-offices to increase efficiency in the workplace. Many Public and Private Organizations are taking advantage of the benefits that automation offers. Speed, convenience, accuracy, and innovation are some of the primary benefits a business can derive from process automation in their offices or work areas. The purpose was to automate the process of Sub-offices of BPO. previous software for automation was only being used in Head Office which then increased the efficiency of BPO but Sub-offices were still working manually. To improve the overall workflow of BPO principle offices and sub offices Synesis IT has developed this system.

Feature of the Product

- Mail Tracking Module (Registry Letter, Parcel, GEP, EMS, VPP/VPL, Mail list, Inbound/outbound register, E-commerce article etc.)
- Accounts and Financial Administrative Module
- Pension Payment Module
- Audit and Reporting Module
- System Administration and User Authorization Module

Benefits of the Product

- Rapid Customer Services from Sub-offices.
- Reduced Manual work.
- Easy access of Information and avoid long tiring data entry.
- Better Reporting and Real time analysis.
- Easier and faster decision-making opportunity.

Highlights

- Automated office management System
- Management Information System
- Offline user facilities
- Efficient reporting System.

Human Resource Management, Payroll, Employee Management, Company Management

Payroll management software automates, streamlines, standardizes and centralizes payroll processes. Specifically, the following features of payroll management software accomplish the myriad aspects of payroll, from calculating wages and taxes to planning employee benefits and managing attendance. One of the main advantages of payroll management software. The module consolidates wage-related items like attendance, salary grade, benefits, reimbursements, leaves, advances, withholding taxes, terms and policies, etc. to compute wages. Most solutions need only to be manually set up with your rules, then the system takes over the payroll process.

Feature of the Product

- Leaves management
- Expense management.
- Benefits, bonus management.
- Income tax & deductions
- Time and attendance tracking

Benefits of the Product

- Leaves management
- Expense management.
- Benefits, bonus management.
- Income tax & deductions
- Time and attendance tracking

Highlights

- Depositing Directly to Account
- Customization at its best
- High Level of Security
- Know about Streamlining
- Monitoring and Tracking

Integrated Business Application & ERP

Activations made easy

Activyzen allows activation managers have full freedom in designing, managing and monitoring their on-ground activation campaigns digitally via an agent app and real-time cloud database sync. This ensures financial return, safety and most importantly authenticity of the undergoing activation. Since the system is fully automated, it is less prone to error, impartial and lightning fast in data processing enabling the management take decisions timely and more effectively.

Feature of the Product

- Real time activity tracking and monitoring ensuring highest level of authenticity
- Only one single agent app that transforms for individual campaign needs upon login
- Safety features for the agents working on ground
- Sampling product stock allocation & management
- First ever activation solution in Bangladesh with instant mobile money transaction facility

Benefits of the Product

- Client can work with multiple agencies at a time in various combinations for different campaigns.
- Brand Promoter profiles are maintained for lifetime and performance can be appraised.
- Data authentication via selfie attendance, in-app image evidence collection and location data.
- Flexibility of integration with any existing ERP like SAP etc.
- All standard reports as well as custom reports based on advanced query can be generated

Highlights

- One single app for all ongoing activation campaigns
- Real time reporting of all ongoing campaigns
- First ever activation solution in Bangladesh with in-app built-in Safety Measures
- First ever activation solution in Bangladesh with mobile money transaction facility
- A solution platform that morphs according to the client need

Know your customers better

Listenyzen enables brand guardians' access and manage all their customer interactions on various social media platforms like Facebook, Instagram, Twitter, WhatsApp etc. At the same time, it provides insights via an organized array of data analytics accumulated from various customer touchpoints. The platform is flexible enough to accommodate manual data inputs as well to incorporate additional data from sources which do not allow API integrations for automatic data pulling. It also uses Natural Language Processing (NLP) for auto-analyzing text contents in Bangla, English as well as Banglish.

Feature of the Product

- Real time community management stats and reporting
- Simple and user-friendly interface for easy management and understanding
- Unique individual credentials to track user performance
- Chatbot integration and interaction analytics
- Extensive analytics based on own and collected competitor data

Benefits of the Product

- Client can deploy both own resource and outsourced agency manpower using the same system
- Both in-house and agency customer service performances can be appraised
- Chatbot integration can massively bring down human involvement
- Flexibility of conducting various analyses on the usage data
- All standard reports as well as custom reports based on advanced query can be generated

Highlights

- One single platform to manage all customer engagements
- Real time notifications and resolution stats over a single dashboard
- Chatbot compatible and smoothly integrated with the system
- Highest level of authentication measures to ensure solid data
- A solution that not only makes operation easy and effective, but also saves cost

Merchandising at fingertips

Merchandyzn allows back-office managers have full control over allocation, distribution and monitoring their on-ground merchandisers' activities digitally with a combination of merchandiser app and back-end admin panel with real-time cloud database sync. This ensures effective execution, compliance, and most importantly authenticity of the merchandising status and return from it. The system is fully automated making it less prone to error, zero scope of manipulation and instant data processing. This enables the management take decisions timely and more effectively.

Feature of the Product

- Real time activity tracking and monitoring ensuring highest level of authenticity
- Simple and user-friendly interface for easy execution and understanding
- Unique individual credentials to track user performance
- Permanent Journey Plan (PJP) design and location-specific data representation
- Extensive analytics based on own and collected competitor data

Benefits of the Product

- Client can deploy both own resource and outsourced agency manpower using the same system
- Merchandiser profiles are maintained for lifetime and performance can be appraised
- Data authentication via unique merchandise code, outlet ID and location data
- Flexibility of integration with any existing ERP like SAP etc.
- All standard reports as well as custom reports based on advanced query can be generated

Highlights

- One single app for all sorts of merchandises
- Real time reporting of all ongoing merchandising activities
- Total control over the operation from the back-end admin panel
- Highest level of authentication measures to ensure solid market data
- A solution that not only makes operation easy and effective, but also saves cost

The Business Management Solution for Small and Midsize Enterprises

SAP Business One is an affordable, integrated enterprise resource planning (ERP) solution designed to enable growing small to mid-sized enterprises and large enterprises with subsidiary operations to better manage their entire company. SAP Business One provides one simple solution that streamlines business processes, provides real-time information, and helps boost overall business performance. It integrates the operational and financial processes of businesses in a single software system with a cost-effective approach. It lets you manage and coordinate customer relationship management, sales, purchases and procurement, finance and business intelligence reporting.

Feature of the Product

- Improve margins, reduce errors, and drive more profitable decision-making with a complete set of tools for streamlined financial operations
- Oversee the entire sales process and customer lifecycle more efficiently – from initial contact to final sale, after-sales service, and support
- Optimize purchasing practices and control costs by managing the complete order-to-pay cycle including receipts, invoices, returns, and payments
- Create timely and accurate reports based on company-wide data with analytics and reporting tools
- Take advantage of extensive industry-specific functionalities, best practices, and processes with tools designed for midsize business

Benefits of the Product

- Targeted business growth through streamlined operations
- Improved customer retention and satisfaction through quicker response time and instant access to customer information.
- Operational efficiency achieved by eliminating redundancy and manual data entry errors with integrated core functionality.
- Closer relationships with key stakeholders including customers, vendors, and employees through better supply chain management.
- Lower technology costs and speed time to value

Highlights

- Globalized Business
- Powerful Platform
- Easier to Implement
- Extended Core Functions
- Greater Industry Focus

Barcode enabled real-time production tracking system for garments

This is unique and cost saving product for apparel industry. It starts from cutting by generating barcode enabled bundle card to finishing. All reports from cutting to finishing will be generated automatically and you can download reports as pdf or excel. You can track excess cutting and consumption used. It saves manpower, time and cost. We have submitted a ROI to IBA, Dhaka University that you can save at least 40,00,000 BDT per month for 30 lines factory. But of course, you have to maintain the procedure of the system.

Feature of the Product

- Cloud-based and remotely accessible
- Barcode enabled and automated
- Real-time efficiency and reports
- Tracks excess cutting and fake production
- Automated challan & gate pass.

Benefits of the Product

- It saves fabric.
- It saves manpower, time & cost
- Instant decision making
- Lifetime data backup.
- Tracks whole production information's.

Highlights

- Cloud-based and remotely accessible
- Barcode enabled and automated
- Real-time efficiency and reports
- Tracks excess cutting, fake Production & hourly production report.
- Automated challan & gate pass.

“Changes for the Better”

One Stop Service Platform (OSSP) is an automated process reengineering service that maintains enhanced security, privacy as well as audit logs. It is an incredibly useful framework that introduces various latest features with extra layers of security and reliability. As a centralized system, this framework reduces process time and expenses, also offers end-to-end application process with data transparency, security and non-repudiation. This platform independent framework has central login facility and authentication system where multi-level security is ensured from a single point. Hence, with single credentials (one email and password), it is possible in OSSP to access multiple authorized systems. Third-party login systems such as Google and UDC (Union Digital Center) are also available here. Moreover, its scalability allows integration of multiple services.

Feature of the Product

- Central/OSSPID Login with multiple security layers
- Dynamic Dashboard & Activities Summary
- Framework to design process & configuration
- Online verification of National ID from Election Commission
- Multichannel payment gateway incorporation

Benefits of the Product

- Centralized & Secured Document verification that includes QR-Code, Bar Code & Digital Signature.
- Quick Deployment & Training Management System
- Dynamic reporting engine
- Multi Stakeholder Operation
- Block-Chain mechanism to ensure proper audit report generation for any transaction

Highlights

- Single Sign-On System
- Mobile App
- 24x7 Operation
- Dynamic & Configurable Reporting Engine
- Simple & Secured Certificate Verification

“Queue Pro”

Enterprise Queue Management System

Queue Pro is an effective & systematic queue management system designed to ensure disciplined & guided customer experience. It is a process that manages the queue in any customer interaction point smartly. The process starts with a customer who just pops in the customer care center. The customer will have to select the service he/she is looking for by pressing the options at the touch screen monitor. Once the service type is selected, the system will generate a token with the token number according to his/her service priority. The center supervisor will be able to monitor the queue status from his/ her desktop online. The management will get the data and summary of information about the number of customers and service matrix, time and other special reports.

Feature of the Product

- Touch Screen based Self Service solution
- Support single / multiple selections of services at the time of dispensing the token
- Multi-lingual support for kiosk and voice announcement
- Categorizes the customers with prioritizing the services
- Card Reader and third-party software integration with Customer

Benefits of the Product

- Guiding customers to get the right service from right desk in a hassle-free environment.
- Customer can get information about new products and services.
- Teller gets prior notification when a customer comes for service and can make a healthy relationship with customers.
- Management can have sufficient data to be analyzed and take further decision for resource utilization accordingly.
- Organization can promote new products and services to the customers.

Highlights

User based access; Dynamic & Configurable Reporting ; Engine Secured System ; Local, Central and Hybrid system; KPI measurement tools for executives.

E. B. Solutions Limited

Around 2004, E. B. Solutions Ltd. ("EBS") ventured into the Digital marketplace of Bangladesh targeting the niche segment of Web based software development for corporate houses. Later, we evolved as a VAS provider in 2006 and since then we have launched many innovative solutions and content services. As a company, we are emerging as a key digital service player through local and international partners collaboration and we truly believe that we can continue to provide cutting edge digital services in coming days. Our people is our culture, and innovation with a blend of ingenuity is our motivation for progress.

Dial into Diversity

IVR based solutions have been the heart of traditional telecom VAS offerings for years. Even as the smartphone apps and new generation services have started taking over, IVR services still have their sparks simply because you can just dial a number and get served right away even when there is no internet - often at a lower cost than that of data packs. Over the years, we have proven ourselves quite adept in designing such solutions. You can dial our codes (see details in the Highlights) to enjoy music, community radio, love, fun, ghost stories, audio books and many more services.

Feature of the Product

- Largest collection
- Popular and Trending contents
- Smart, user-friendly service design and navigation
- Affordable pricing; flexible subscription packages
- Services & contents designed for all ages and classes of society

Benefits of the Product

- Take advantage of the smart service design and user-friendly navigation
- Enjoy the guarantee of high quality, noise-free contents
- Connect to your desired service/contents anywhere, anytime
- Pick the pricing or package, which suits you most

Highlights

- Islamic Service: Dial 786 (Teletalk) or 20786 (Airtel/Banglalink/Robi)
- Music Service: Dial 4646 (Airtel/Robi) or 24646 (Banglalink/GP)
- Community Radio: Dial 22001 (Banglalink/Robi)
- Love & Fun: Dial 24636 (Banglalink); Dial 463602 Or 463603 (Airtel/Robi)
- Audio Books: Dial 27050 (Banglalink/Robi)

Smart PABX System

mConnex is a virtual PABX system which runs on an operator's end network. It is a solution that requires no device, almost zero maintenance or HR costs and performs all the tasks that a traditional PABX solution offers. This solution offers many features that today's corporate clients as well as small & medium size enterprises have a dire need for. These include the mobility of the number, the SMS and Voice services in one, no missed calls, increase in efficiency through call conferencing and call parking etc. Customer can use their smartphone and run small or medium scale call center.

Feature of the Product

- Call Auto Attendant, with Day time / Night Time Welcome greetings
- Dial-In to smart PABX Extensions, Extension Dial-Out to 3rd Party
- Call Transfer/forward
- Smart Call Routing (call routing, DND)
- Info Message Player (Schedule broadcast)

Benefits of the Product

- No Additional device required!
- Almost zero maintenance or HR cost.
- Increased efficiency in conference call & call parking
- Call Queuing, Blacklist to block callers
- Music on Hold

Highlights

- Performs task as a traditional PABX solution
- Extension Calling: Dial-In to smart PABX Extensions
- Extension Dial-Out to 3rd Party
- Smart Call Routing (call routing, DND)
- Call Auto Attendant, Call Queuing, Blacklist to block callers

Spread Your Words

Voice Broadcasting Service (VBS) is a system that enables the user to manage and run outbound dial campaigns- alerts, promotions, updates, or notifications. It is capable of generating automated calls to target list of contacts and delivering them pre-recorded voice messages. VBS helps reduce the time wasted in dialing and waiting for unanswered calls by human agents. However, the system supports connecting the human agent or any functional service/feature upon receiver's choice or call connection. Send a single message or thousands instantly! With VBS, the net you cast is as big or small as you want it to be.

Feature of the Product

- Smart UI to run/manage campaigns
- Campaign Scheduler
- Supports connecting the human agent or any functional service/feature
- Multi Audio File Upload
- Detailed Reports and Call Analytics

Benefits of the Product

- Run campaigns for alerts, promotions, updates, or notifications.
- Easily reach everyone without any waste of time.
- Get responses when contacts use their phone keypads
- Run Analysis on Voice Campaign Summary and Reports

Highlights

- Generate automated calls to target list of contacts
- Delivers pre-recorded voice messages, as per schedule
- Helps reduce the time wasted in dialing and waiting for unanswered calls
- Supports connecting human agent or any feature upon receiver's choice
- Provides detailed Voice Campaign Summary and Reports

Let your subscriber create his/her own plans and manage service

Subscription Management Application (SMA) provides functionalities to support sales and billing of products and services on a recurring basis. The software/application supports various recurring business models such as monthly or annual usage, metered usage or one-time usage. SMA provides tools to automate the manual processes in subscription business with recurring billing, subscription pricing and payment. It manages the entire customer life cycle, from accepting recurring payments to handling customer subscriptions. SMA helps users to manage and automate their subscription billing and transactions tasks. The API environment enables users to integrate the solution with their existing applications and websites.

Feature of the Product

- Multiple Language Selection
- Customer Account Management
- Customer's Balance Check & Refill
- Purchase Data Bundles
- Create your own plans and pay

Benefits of the Product

- Intensive Data Analysis in the back-end.
- Create user segments and engage targeted segment with offers/packages through push notification.
- Availability of statistics like active users, user profiles, transactions & revenue.
- View new installs for daily, monthly, weekly and yearly along with custom filters.
- Browse through user feedbacks as well as view and filter activity logs of users.

Highlights

- Browsing Partner shops for offers
- Create and run campaigns
- Services management
- Usage Graphs
- Notifications

Right time, Right place, Right people

Digital advertising operations demand that considerable amounts of time be spent in back office functions. While those operations are vital to producing and optimizing successful campaigns, they also absorb valuable time that could be spent on more proactive, strategic, or revenue-generating tasks. Regardless of the size or scope of the campaign, we help our clients maximize their resources to deliver comprehensive campaigns that achieve optimal results.

Feature of the Product

- End-to-End Campaign Management
- Inventory Management
- Reporting and Analytics
- Quality Assurance: Ongoing Technical and Quality Assessments
- Customer Support and Troubleshooting

Benefits of the Product

- Facilitate online campaign management process
- Receive media plan briefs and upload media plan on client platform
- Add creative to placements and implement click tag
- Ensure accuracy of media plan entry and click tag implementation
- Track all advertising tools, partners and promotions used throughout the campaign to maximize ROI.

Highlights

- Quality, Cost, High-caliber staff.
- Creative, strategic thinkers.
- SEBPO has experience with over 75+ Digital Advertising platforms.

The choice for better change

PrismPOS meets the needs of retailers and help organizations to reduce manual entries and mundane tasks to provide more time and freedom for development. The solution operates both online and offline and monitor sales, payments, returns, inventory, and cash, as well as run more complex aspects of retail such as inter-branch transfers and price management and more. PrismPOS improves operations in all types of fast retail including but not limited to supermarkets, c-stores, restaurants, hotels & hospitality businesses, beauty salons and general retail etc. PrismPOS stretch retailers more opportunities to micro-market specific product categories and influence consumers at earlier points in the sales funnel.

Feature of the Product

- Fast Checkout
- Inventory/SKU Control
- Sales Promotion
- Customer Loyalty
- Intelligent Dashboard & Report

Benefits of the Product

- Improved customer service
- Simplified stock management
- Better financial reporting
- Streamlined business operations
- Optimised record keeping

Highlights

- Platform Independant
- Works in both offline & online
- Integration with ERP & E-Commerce
- Data Security
- Report Exports to PDF, XLS, CSV, DOC

Representative Clients

GDL Mart, One Stop Services, Navana CNG, Womens Secret, Cusie Fashions, Metro Coverage, DressDi

Number of Installations/Clients: 100

It's easy to use, has logical concepts, is user-friendly, and is very affordable compared to other systems. The vendor has been excellent with training and followup questions. Most of all it can use both offline and online. We made the right decision going with PrismPOS.

– Md Kamrul Islam Chakder, Managing Director, One-Stop Super Shop Limited

Enterprise software, Small Business Integrated software

POS software is used primarily by eCommerce and brick-and-mortar stores to conduct sales transactions. Such tool has the functionalities of both a computer and a cash register. With POS software, sellers can input orders, compute the cost and receive customer payments... POS software revolves around its main purpose – to process sales. However, point-of-sale software does so much more than that. Full-featured POS systems can handle inventory tracking, analytics, sales monitoring and reporting, customer data management, employee management, mobile connectivity, and robust integrations.

Feature of the Product

- Sales reporting and analytics.
- Inventory tracking.
- Sales & Marketing.
- Customer management
- Employee management

Benefits of the Product

- capture and analyze vital data on product sales.
- upload all your products in a bulk upload.
- Easily maintain Stock.
- Monthly and Yearly revenue.

Highlights

- Easy To use and time Save.
- Maintain Product Sales and Purchase History.
- Customer Details Information.
- Maintain Daily transaction and ledger
