Preface

"Software and IT Services Catalog 2021" is an endeavor of BASIS for addressing the much-needed information database that can assist prospective software buyers to locate the right software/IT solution providers for their respective organizations.

This is the Sixth time that a comprehensive software catalog is published by BASIS. The last one was published in 2019. In 2006, BASIS published this document for the first time. This year, the publication comes up with a greater number of categories. It includes 155 products and services; all developed locally, from 62 software and ITES companies.

A detailed profile of each product/service has been presented in the catalog in a structured way. Information on client benefits, specific product features, a representative client first, and other related facts and figures (such as total no. of clients, target industry, certification, etc.). All this information is presented in a way to help the buyer understand the suitability and applicability of any particular IT solution for addressing the business need of an individual organization. To help the client in judging the credibility of the solution offering company, a brief company profile has also been presented in each case.

This catalog is a result of the extensive effort of the BASIS research team. Information presented has been compiled in an interactive way that involved multiple rounds of consultation with the solution-providing companies. No doubt, there are shortcomings and further scopes of improvements. Suggestions and feedback from the users of the catalog will be helpful to make future publications enriched.

BASIS would like to thank all who have come forward with their valuable contribution in publishing this catalog. BASIS is grateful to all the software and ITES companies who have provided their valuable time and effort for providing the information and also the organizations who have published advertisements in the catalog. BASIS especially thanks the ICT Business Promotion Council (IBPC), Ministry of Commerce for supporting with resources for the publication and distribution of this catalog.

About BASIS

Bangladesh Association of Software & Information Services (BASIS) has been working as the national trade body of the ICT sector of Bangladesh to develop a significant, sustainable, and successful Software and IT Enabled Service industry since 1998. Today BASIS contains 1600 members whereas BASIS started its journey with only 18 charter members. Members of BASIS account for the major share of the total software & IT services revenue of the country. BASIS acquires a pioneer position in the sector; which leads it to advocates policy formation and organizes different programs and activities for the development of the sector. As per the DTO Circular published on September 2, 2019 BASIS Membership is mandatory for all Software and ITES Companies operating in Bangladesh.

In the area of domestic & international market development, capacity building of the member companies, member service development, and delivery, advocacy for business-friendly & enabling government policies, social contribution; BASIS is working incessantly with its regular program and activities. Undoubtedly, BASIS has acquired the utmost position and tremendous success in attaining these targets.

Mission

To develop the ambition, capacity, and sustainable growth of the BASIS member companies, and to lead and deliver the BASIS contribution to "One Bangladesh".

Vision

To lead the development of a vibrant, sustainable, and successful software and IT service industry in Bangladesh.

BASIS, through its regular programs and activities, works on the following broad objectives.

- **Domestic market development** by creating awareness among potential IT users from both private and public sectors, establishing market places for IT solutions, and ensuring a level playing field for local software and ITES service industry.
- **International market development** for the local software and ITES industry through networking and business linkage events as well as brand promotion of the industry at the international level.
- **Capacity building** of the member companies as well as the industry as a whole through management/entrepreneurship development initiatives and technology training and resource sharing.
- **Provide services** to its members in different operational and business issues like tax, export/import, remittance, foreign visit, legal, IPR, etc.
- **Advocacy** for business-friendly and enabling government policies for the development of software and IT-enabled service industry.
- **Contribute,** as a responsible citizen group, to the long-term national vision of becoming a knowledge economy, particularly through engaging with the young generation and motivating them for becoming technology leaders of the future.

BASIS organizes the biggest private-sector software and ITES exposition in the country, The BASIS SOFTEXPO, as a part of the domestic market development initiative. Since then, BASIS SOFTEXPO has become the annual colossal corporation,

where both at corporate/organizational and individual level, private software & IT service companies in the country project their products and services to potential IT users. BASIS annually publish software and IT service catalog and Member Directory for promoting local solution providers to potential business clients. As BASIS has been working with different ministries and government agencies, the organization is endeavoring to play a catalyst role to ensure its member organizations' effective contribution to different government initiatives taken in line with the Digital Bangladesh vision of the government.

To create international exposure for member companies, BASIS ensures participation at international IT fairs and marketing missions as well as creates business linkage programs for outsourcing, B2B trade platform, and capacity-building training programs. The organization also promotes international market augmentation through networking with foreign clients and participating in international business events. Besides, to build proficient entrepreneurs and the industry BASIS is working rigidly. BASIS provides necessary advisory services in the area of financing, tax, VAT, export, import, remittance, foreign visit, etc. In light of this initiative, BASIS started its training activities to address the skill gap of HR in the industry in 2007. Later in 2012, BASIS institutionalized its training activities and set up BASIS Institute of Technology & Management (BITM).

BASIS played an active role in the formulation of National ICT policy 2009 & 2018, Digital Commerce Policy 2018 & Outsourcing Policy 2018. In the matter of policy advocacy for the region, BASIS regularly interacts with relevant agencies of the Government and other relevant stakeholders. BASIS is also playing an active role in formulating Public Procurement Policy (PPP) Amendment, Made in Bangladesh Policy, Intellectual Labor Law. BASIS has worked closely with the Ministry of Commerce in drafting the ICT-related chapters of the Import and Export Policies of 2015-18 & 2019-21. Because of the repeated persuasion of BASIS, NBR withdrew the VAT from the E-commerce business. Along with this, the Government of Bangladesh has extended the time frame of income tax exemption for software and ITES companies till 2024. In addition to that, BASIS has been assigned as a counselor and mentor to the Startups. BASIS represents the industry in different national level committees including Digital Bangladesh Task Force, Steering Committee of Bangladesh Hi-Tech Park Authority, Management Committee of Export Promotion Bureau (EPB), and Executive Committee of Bangladesh Computer Council (BCC).

Organization Structure and Governance

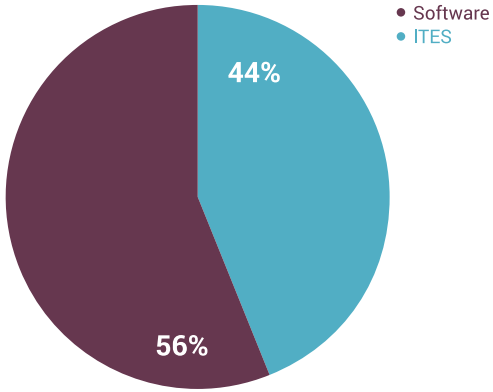
BASIS Board: BASIS is run by a nine-member Board of Directors (elected by direct voting of the members for a two-year term). The Board of Directors has the overall responsibility for running the affairs of BASIS and setting policy guidelines for its secretariat. Aside from the elected board of directors, 17 Standing Committees comprise members who are experts in relevant areas.

Bangladesh Software and ITES Service Industry

Status of Software and ITES Industry

Bangladesh has identified ICT as a "prospective sector" as it represents the potential for successful improvements, job creation, industry growth and developments, and high spillover effects to other sectors as well as improving governance and facilitating inclusion. The current World Bank's Country Assistance Strategy for Bangladesh also recognizes the key role of ICT in supporting Bangladesh's growth, competitiveness, and governance agenda. The ICT industry in Bangladesh, especially the software and ITES industry, is moderately small compared to the dimension of its national population (160 million-plus), and the size of the national economy. However, the software and ITES industries in this country have started promptly growing in recent years. The average annual growth rate of these industries here has been over 40 percent for the recent five years, and this growth rate is expected to continue. This optimistic growth is supported by good software export trends and large demand for IT automation in the domestic market.

Chart 1: Bangladesh Software and ITES Industry



Source: BASIS Survey

Recently in Bangladesh, large-scale automation projects have been widely implemented in the sectors of telecom, banking, finance, pharmaceutical, and garment/textile industries. Domestic demand for software and ITES industries is expected to increase more.

As of now, there are over 4500 Software and ITES companies are registered in Bangladesh. These companies employ over 300,000 local ICT professionals. The size of the Local ICT market excluding telecom in Bangladesh is estimated to be USD 1.54 billion (approx.). More than 400 companies export their products to over 80 countries. Current Export Earnings Crossed the mark of USD 1 billion. The major export market in North America and the EU but recently many IT companies started to export to the Middle East and East Asian countries, especially to Japan. Over 40 companies, among the exporters are established through joint-venture with an overseas company or as an offshore development center (ODC) by one-hundred-percent foreign capital.

IT companies have created a sizable market space in service industries like telecommunications, retail and wholesale, healthcare, education, publishing, and real estate. The growth in the software and ITES industry has been driven by this growing IT automation demand in the domestic market. The impressive trends in software exports in recent years played a deterministic role as well. Bangladesh has made major strides in laying the groundwork for a diverse and successful outsourcing market.

The government has formulated a draft `Made in Bangladesh - ICT Industry Strategy' aimed at turning Bangladesh into a manufacturing hub, enhancing export of local products, attracting foreign investment and creating employment.

The draft strategy prepared by the LICT project of Bangladesh Computer Council (BCC) under ICT Division has proposed three terms - short term from 2021 to 2023, mid-term from 2021 to 2028 and long term from 2021 to 2031 for implementation of the 65 action plans.

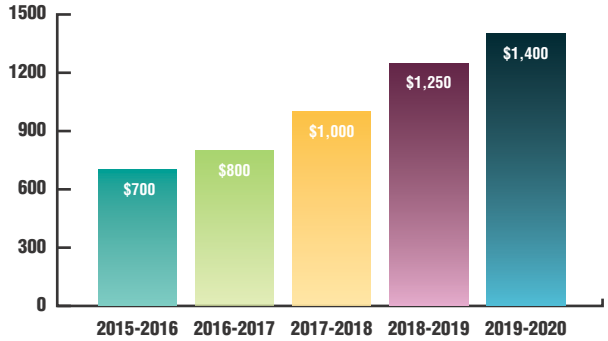
Information Communication Technology (ICT) sector can be a great means to create employment for the educated youth of this country without creating much pressure on its environment and very limited energy resources. ICT can play an important role in women empowerment too in a way that; if Bangladesh further strengthens its ICT infrastructure and facilitate skilled women to tap into the global ICT market, then women empowerment through decent work could be more substantiated here.

The software and ITES sector is not only contributing significantly to the national income, but it has also created high-quality employment for young IT graduates. Many tech-savvy young graduates, some of them returning from abroad after completing education, have started their own IT ventures over the last few years. Despite various local and global challenges, these young entrepreneurs have successfully established their businesses.

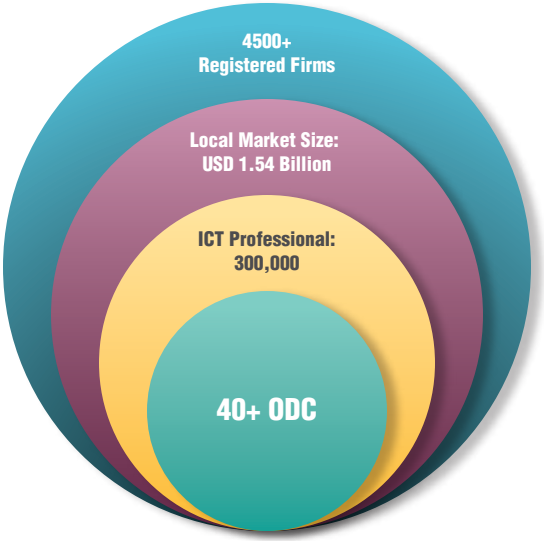
Export of Software and ITES from Bangladesh

Bangladeshi software firms have expanded their footprint in the global market as the demand for local information technology-enabled services (ITES) has increased. In recent years Bangladesh earned a rapid growth in ICT export - which shows a rapid increase tend in ICT export.

Chart 3: ICT Export Trends in last 5 Years



Source: BASIS Survey



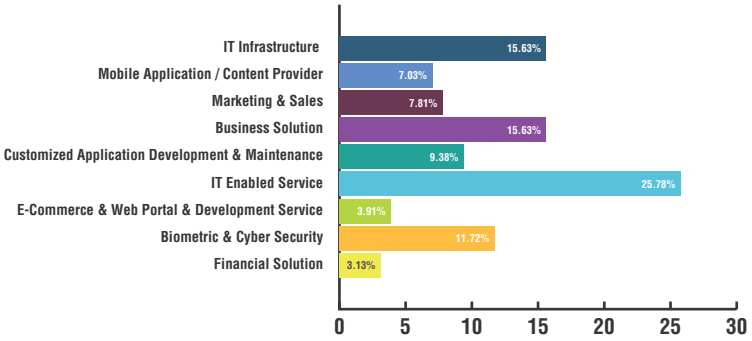
Source: BASIS Survey

Snapshot of the Industry: Size, Composition and Market

1720 crore taka has been allocated for the IT sector in the 2021 fiscal year. This allocation is about 20% more than the last year's announced budget. As per BASIS, there are over 1600 registered software and ITES companies, along with thousands of unregistered small and home-based software and IT ventures doing business for both local and international markets.

Some companies are developing web applications based on the cloud delivery model, thus defining a new wave in the IT industry. A large part of this industry provides business application solutions including accounting software, human resource software, office management, and security solutions, and sales automation and inventory management systems to the private sector. However, a major focus for most IT companies still continues to be in the different business, banking and other financial sectors.

Chart 2: Business Specialization of BASIS Member Companies



Source: BASIS Survey

IT companies have created a sizable market space in service industries like telecommunications, retail and wholesale, healthcare, education, publishing, and real estate. The growth in the software and ITES industry has been driven by this growing IT automation demand in the domestic market. The impressive trends in software exports in recent years played a deterministic role as well. Bangladesh has made major strides in laying the groundwork for a diverse and successful outsourcing market.

The government has formulated a draft `Made in Bangladesh - ICT Industry Strategy' aimed at turning Bangladesh into a manufacturing hub, enhancing export of local products, attracting foreign investment and creating employment.

The draft strategy prepared by the LICT project of Bangladesh Computer Council (BCC) under ICT Division has proposed three terms - short term from 2021 to 2023, mid-term from 2021 to 2028 and long term from 2021 to 2031 for implementation of the 65 action plans.

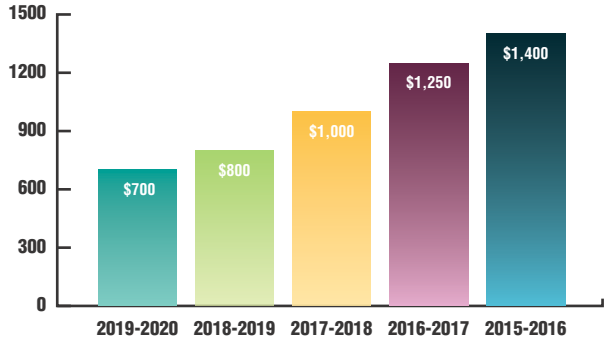
Information Communication Technology (ICT) sector can be a great means to create employment for the educated youth of this country without creating much pressure on its environment and very limited energy resources. ICT can play an important role in women empowerment too in a way that; if Bangladesh further strengthens its ICT infrastructure and facilitate skilled women to tap into the global ICT market, then women empowerment through decent work could be more substantiated here.

The software and ITES sector is not only contributing significantly to the national income, but it has also created high-quality employment for young IT graduates. Many tech-savvy young graduates, some of them returning from abroad after completing education, have started their own IT ventures over the last few years. Despite various local and global challenges, these young entrepreneurs have successfully established their businesses.

Export of Software and ITES from Bangladesh

Bangladeshi software firms have expanded their footprint in the global market as the demand for local information technology-enabled services (ITES) has increased. In recent years Bangladesh earned a rapid growth in ICT export - which shows a rapid increase tend in ICT export.

Chart 3: ICT Export Trends in last 5 Years



Source: BASIS Survey

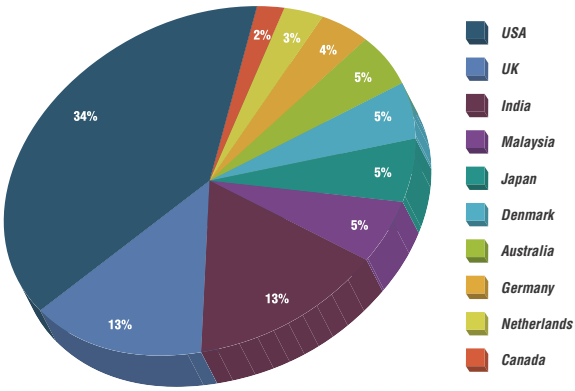
The local software firms export to around 80 countries across the globe, making Bangladesh a major source of quality software products. Bangladeshi firms also maintain global market-opening liaison offices in different countries, including the USA and the UK, according to the officials.

Bangladesh Association of Software and Information Services (BASIS) has been leading the sector as the apex trade body in the information and communication technology sector.

BASIS data shows that more than 25-30 Bangladeshi companies have already set up offices in UK, USA, Japan, Denmark, South Korea, Germany, Netherlands, Australia, and Canada.

Around, 400 local top software companies are trying their best to grab the whole of the country's software market while they have also put their footprints in foreign markets, like the USA, Japan, and Germany.

Chart 4: Top Export Destinations



Source: BASIS Survey

According to BASIS, local software firms are growing fast with the yearly export earnings hitting around $1.3 billion (Approx.) through IT services where local firms contributed 75 percent and remained 25 percent held by foreign firms.

Soon the industry will reach out the target of $5 billion export from IT services and software and creating two million jobs in the sector by 2025. The association is now looking to expand its outreach in potential markets, including the USA, the UK, and Denmark, and in African countries.

Progression of Bangladesh's software and ITES industry

To achieve recognition, among the users of software and web, mobile and game applications, companies need to conduct research on the demands and recent trends of the software industry of Bangladesh as well as the overseas markets. A major part of the business still comes from the local market. Based on clients' feedbacks, they can plan changes to their current service offerings or innovate future strategies. In addition, new companies can follow the key troupes in the industry and learn about their service offerings and strategies to survive in the

competition in domestic market and enable companies to compete with the international players in the software industry. Although Bangladesh is a relatively recent entrant in the global ICT outsourcing market, we have made great strides in this market over the last ten years. Bangladesh today has more than three hundred software & IT-enabled services firms serving clients in more than thirty countries on four continents.

The software and IT-enabled services in Bangladesh are also blessed with a large number of young, enterprising, and well-educated entrepreneurs who are passionate about ICT entrepreneurship and will surely keep this industry here thriving for many years to come.

ITES sector is an untapped opportunity with huge possibilities. It is considered to be a thrust sector today, due to its rapid expansion and growing contribution to the economy.

Accounting & Financial Software

HRITEE

HRITEE is a full-fledged VAT management software for any kind of business vertical.

HRITEE is a full-fledged VAT management software for any kind of business vertical. It covers Manufacturing, Service business, Trading, Import & Export and Banking service. HRITEE also covers Retail Operations, including POS. It generates all Mushak as needed by the VAT & SD Act 2012 and VAT & SD Rule 2016. HRITEE is capable of integrating a third-party application for source information to avoid duplicate entry.

Feature of the Product

- NBR Enlisted Oldest Software
- Strong & dedicated support team
- User-friendly & unlimited user
- The software can manage all type of procurement and inventory in addition
- Robust reporting facilities & number of MIS Report

Benefits of the Product

- MUSHAK Generation,
- VAT Return,
- Item Consumption,
- Procurement,
- Inventory,

Highlights

- HRITEE complies with all transaction and prepares a fully compliant VAT return to the Authority.
- The software allows the user to declare prices through MUSHAK - 4.3.
- Users can create purchase orders through the system and it records the cost.

CSL SOFTWARE RESOURCES (CslSoft)

The present CslSoft started its operation as a software department of CSL (Computer Solutions Ltd.). In the year 1985, the promoters had the vision and philosophy to create an environment within the country where the local resources in a team will produce state-of-art world-class software products for the country and as well as for the international market. With the growing need for customized software, the team also started growing in its number of members. With the same leadership, the initial transformation was made from a department of CSL to an independent company called CSL SOFTWARE RESOURCES (CslSoft), in the year of 1996. And later in 1998, it was incorporated as a 100% software development private limited company.

CRM

business automation

Customer Flow Management System

Improving customer experience

Customer flow management system is designed to ensure a disciplined & guided customer experience. It is a system that manages the customer flow in any customer interaction point smartly. The process starts with a customer who just pops into the customer care center. The customer will have to select the services he/she is looking for by pressing the options at the touch screen monitor of the kiosk. Once service is selected, the system will generate a token with the token number according to his/her service priority. The center supervisor will be able to monitor the queue status from his/her desktop online. The management will get the data and summary of information about the number of customers and service matrix, time, and other special reports.

Feature of the Product

- Touch screen based self-service solution
- Support single/multiple selections of services at the time of dispensing the token
- Multi-lingual support for kiosk and voice announcement
- Categorizes the customers with prioritizing the services
- Card reader and third-party software integration with customer

Benefits of the Product

- Guiding customers to get the right service from the right desk in a hassle-free environment
- Customer can get information about new products and services
- Teller gets a prior notification when a customer comes for services and can make a healthy relationship with customers
- Management can have sufficient data to be analyzed and take a further decision for resource utilization accordingly
- Organizations can promote new products and services to the customers.

Highlights

- User-based access
- Dynamic and configurable reporting
- Engine secured system
- Local, Central and Hybrid system
- KPI measurement tools for executives

CTrends iSurveyGeo

Survey with geographic validation

CTrends iSurveyGeo is a generic product platform hosted as a cloud service to help various companies to conduct 5 types of surveys, utilizing geographic authentication of data. Using this platform as a service, our clients can easily conduct surveys with lower costs and shorter time. Our system recognizes the geographic admin boundaries fall countries at the 3/4/5th level. It is our global service offering platform. We also have a program to allow country-wise partners to deal with the clients of respective countries.

Feature of the Product

- IT & telecom network site survey for planning & design
- Telecom & Wi-Fi signal survey with an automated heat map
- Equipment survey
- Market survey
- Population survey

Benefits of the Product

- Geo-authentication of survey data
- Easy survey planning, monitoring & reporting
- Systematic data transfer to and from other applications using API

Highlights

- Mobile app-based online survey of various types,
- Can control survey entries by regional boundary,
- Automated survey reports,
- Online monitoring of surveyors,
- API based integration with external systems

Computer Vision Based Vehicle Access Management

eGeneration

Secure and automate your vehicle access using computer vision

Our Computer Vision Based Vehicle Access Management System is a standalone system for no-fuss entry and exit. An easy way to make entry and exit secure, it manages access by comparing license plate numbers to lists of authorized vehicles. The License Plate is detected on the vehicle. Then the License Plate is scanned to get the License Number with 90-100% accuracy. The License Plate number is crossmatched with the database. Barrier Opens/Remains closed depending on access level.

Feature of the Product

- Maintaining Huge Number of Incoming/Outgoing vehicles Numerous access points
- 24/7 operation
- No Requirement of additional human resource
- No Unauthorized entries
- Proper Record of access information

Benefits of the Product

- Easy to install, manage, modify, and expand
- Cost-effective solutions for protecting people and property without manned guard stations and frequent guard tours
- Access is automated and security events trigger alarms and notifications
- Controlling parking occupancy by assigning the fixed number of parking bays to every tenant by calculating time & counts of vehicles
- Works seamlessly with all hardware and third-party solutions

Highlights

- Computer Vision
- Natural Language Processing
- Data Analytics
- Internet of Things (IoT)
- Machine Learning

Shikorr

Made for Bangladeshi, Made by Bangladeshi

"Shikorr" is basically a platform of virtual socialization; it will works as both as social networking website and as a high-tech communication application for everyday use in between homogeneous and heterogeneous groups of Bangladesh, for instance various clubs (sports clubs, social clubs), different samities, alumni associations and student forums of different academic institutions etc. This site will render information to the users, allow them to expose, discuss, and reveal their individual lives, activities, and sometimes help them to promote their businesses as well. Moreover, it is built and designed locally, so that there will be no outside interruptions, and it will be more authentic, more secured, more personalized.

Feature of the Product

- Social Communication both text and audio-video, News Feed,
- Events Management,
- Magazine,
- Printing Souvenir for member only
- Admin Panel for group admin

Benefits of the Product

- Member can attach with own alumni, samity or club using this site.
- Arrange group events using friend's data.
- Publish your creative work on on-line platform
- Souvenir Printing can be done from existing database of shikorr.
- 3-Layers Admin panel for group management

Highlights

- Shikorr makes communications easier.
- It works as a separate location for specific community or groups; sometimes it works as a secret location for particular user group.
- Shikorr creates an identical platform where no one feel alone and interacting people comfortably.
- Shikorr try its best to keep the topic of conversation in the business impartially.
- Safe and Secure communication Site.

Advanced GIS Solutions

Geospatial data acquisition, management, visualization and analytics

Streams Tech Ltd. designs and develops geographic information system software for web, desktop and mobile platforms to help our clients increase productivity and automate complex tasks. We also develop customized ArcGIS® extensions and applications utilizing different mapping providers. Streams Tech Ltd. has extensive GIS knowledge not only in ArcGIS platform but also in various open source stacks like GeoServer, GeoNode, MapBox, Openlayer and Leaflet. Our professional staff uses industry standard tools and programming languages such as Python, .NET, JAVA and database platform like FileGeoDatabase, Oracle, MSSQL and PostgreSQL to develop robust, user friendly and interactive GIS applications.

Feature of the Product

- Develop GIS web services for vector and raster data
- ArcGIS Extension development and Geodatabase design
- Data conversion, collection, modeling and processing
- Create custom and stylish maps for vector and raster layers
- ArcGIS Enterprise application development and deployment

Benefits of the Product

- Design and develop GIS systems and portals for government and business customers
- Cloud or locally hosted low-cost GIS based solution design and development
- Easy visualization of location data with the exact context of dashboard needs
- GIS data sharing and managing platform development
- GIS based asset management system and emergency response system development

Highlights

- Seamless integration with other MIS and CRM solution
- Customization of open-source applications like GeoNode
- Interactive mapping and perform customized spatial analysis
- Location-based services (LBS)
- GIS based decision support system

Business Intelligence
(Power BI dashboard and application services)

Transforming raw data into profitable business action

At Streams Tech, we transform data into information and provide a visual representation through Power BI that helps our clients achieve project targeted goals. We build Power BI Dataflow that extract, predict and present useful business intelligence from data of all shapes and sizes. We gather static and streaming data from on-premises and external sources, then apply machine learning algorithms to the data in order to derive real-time predictive insights. We help clients to better manage and share reports and dashboards within the organization. Streams Tech helps client swiftly tease out valuable intelligence with predictive analytics using Power BI.

Feature of the Product

- Visualizations with robust drill down and slicing
- Define KPI Reports
- Processing of terabytes of unstructured data in Hadoop and consume the data in Power BI
- Solutions using ML and AI in Power BI
- Utilizing natural language querying capabilities in Power BI

Benefits of the Product

- Complex data modeling using Power Query Formula Language (also known as “M”) and DAX
- Development of map based custom visuals for Power BI
- Time series analysis and forecasting
- Interactive visualizations of the relation of multiple data sources
- Standards to find insights from the data

Highlights

- Embed Power BI dashboards in custom web applications
- Client wise theme management
- Responsive dashboard views for mobile devices
- Shared dashboards and reports as organizational content packs
- Authentication, authorization, and deployment to allow customers to find and consume solution in the Services section of the Power BI Content Pack Library

System for Tracking Results and Evidence for Adaptive Management (STREAM)

Ultimate Evaluation through Unlimited Monitoring

STREAM is a powerful M&E system which allows tracking of results and evidence for adaptive management. It incorporates both quantitative and qualitative participatory methods of M&E processes. 20+ modules are incorporated to optimize the complexity and operational flow of coordinating and evaluating the entire program management cycle. STREAM allows organizations to create Log Frame and Detailed Implementation Plan and offers the project management to monitor the project's progress using the Indicator Performance Tracking Table. Census Survey, Beneficiary Profiling, Event and Service Management, Conditional Cash Transfer, Smart Card, Complaint Management and Learning Management modules make STREAM a one stop solution.

Feature of the Product

- A web-based dynamic and intuitive M&E platform integrated mobile application for data collection and field operations
- Manage and maintain complete program workflow
- Interactive survey form design and data collection with approval process
- Multi organization accessibility and management
- Complete audit trail on all data entries, verification, revision and approval

Benefits of the Product

- Customizable to fit organizational needs
- Real-time project/program progress monitoring
- Built on latest technologies for flawless performance and scalability
- Modularized deployment reduces cost
- User-friendly interface compatible to low-bandwidth internet facilities from remote locations

Highlights

- Integrated MIS and GIS
- Dynamic dashboard design and share
- Real-time Data Synchronization with offline features
- Dynamic calculation rules for indicator achievement
- Role based access control with geographical coverage, program activities and operational periods

SytePad - Survey Toolkit

A location-based survey toolkit

SytePad is comprehensive survey application software to design, collect, and review and process field survey data. The survey application enables creation and management of custom survey questionnaire efficiently using user friendly web interfaces. It provides both online and offline survey operation and generates summary reports in tabular, graphical and map views. The application provides full survey team management facility with geographical coverage and data approval processes. It is designed using a scalable architecture to support thousands of concurrent users and is capable of processing millions of records.

Feature of the Product

- Drag and drop survey form design
- Offline survey with auto sync facility
- Image, video and GIS data capture with custom comment with every question
- Team management and role-based access control with geographical coverage
- Data approval process with role-based user control

Benefits of the Product

- Intuitive survey form designer
- Both way data synchronization between mobile and server
- Review and analyze data with different graphical, tabular and map visualizations
- Export data in different format
- Audit trail on all data entries, verification and revision

Highlights

- Managed survey platform with multilingual support
- Easy to manage skip rules to control conditional question setup
- Periodic inspection of same item for progress update
- Line, Polygon and Point geometry data collection with the help of base map and custom map layers
- Geo analytics from collected data

Cyber Security

Annotation service

Create a skilled gig workforce for the opportunity and challenges of the 4th Industrial Revolution (IR)

We provide on-demand annotation services for CV-based ML modules. We also provide annotators training for developing a gig workforce. We are in the development process for providing Cyber security-related products and services and AI-based Mobile App for cattle and fishes.

Feature of the Product

By annotation service, we are helping to develop CV-based ML modules for foreign clients and earning foreign currency. By skill development, we are transforming unemployed youths into the global gig workforce. The App-based AI modules for cattle/fish will help farmers to identify various needs and solutions from home.

Benefits of the Product

- Learning the techniques of developing AI modules through CV based ML process
- Earning foreign currency
- Transforming youths through the cutting edge technology works
- Working to develop homegrown AI solutions for our industry, agriculture, and services.
- Trying to source cybersecurity solutions for the protection against this ever-increasing menace.

Highlights

We are an Artificial Intelligence (AI) based service providing and solution developing startup company. Our vision is to transform Bangladeshi youths through cutting-edge technology-based work experience so that they can avail themselves of the opportunity of the global gig workforce of the 4th Industrial Revolution (RI).

PenTesting as a Service

BEETLES
THE HACKER'S APPROACH

The Hacker's Approach

Redefining the traditional penetration testing model, our PenTests are smaller, faster, agile, and easily integrates with any development environment and processes. Our PenTest_as_a_Service (PTaaS) ensures continuous coverage of the scope through a properly defined, structured approach and collaboration with your internal team.

Feature of the Product

Generally, organizations have a limited or fixed budget when it comes to security. Even then, they would want to utilize that budget to optimize results in both quality and coverage across the application, network, and API layer. PenTests provide that data-driven insight into the security of these layers by comprehensively reviewing related features and components.

Benefits of the Product

- Identify vulnerabilities and assess cyber risk posture.
- Real-world attack simulations. No theory, all fact.
- Data-driven results.
- Increase in customer trust and brand value.
- Meet regulatory and compliance requirements.

Highlights

Our PenTests conforms to trusted and proven industry-standard methodologies that provide the necessary coverage and adheres to compliance and regulatory requirements.

Security as a Service (SECaaS)

"We assist securing today for a better tomorrow"

Many businesses should consider the benefit of Security as a Service (SECaaS). Investing in firewalls, anti-virus, physical office security, intruder alarm, and CCTV may not be enough. Phishing, viruses, malware, denial of service, distributed denial of service, ransom ware, man-in-the-middle attack, and brute force attack, are just a few of the many methods that cyber criminals use to try to compromise with organizations network security. According to the "Verizon 2019 Data Breach Investigations Report", 43% of cyber-attacks were against small and medium-sized businesses (SMBs). Right Time Limited together with renowned service providers supports building your security posture.

Feature of the Product

- Intrusion detection and prevention, Identity management and control.
- Security Information & Event Management (SIEM) and Continuous security monitoring.
- Ongoing vulnerability scanning, Data encryption.
- Local data security on Laptop, Mobiles and Tablets.
- Cloud and Edge data security and Anti-Virus scanning.

Benefits of the Product

- Increased Security, Cost Reduction.
- Save Time, Simplification.
- Faster Threat Response, 6 Latest Technologys.
- Latest Updates, Outsource Costly Skills.

Highlights

- Business Data is found everywhere (known and unknown places) such as local laptops, on local servers, tablets, mobile phones, in the air (via WiFi), cloud services, edge servers and each of these platforms needs to be secured/protected.
- Security as a Service (SECaaS) will protect your organization such as local network devices, edge services, WiFi, cloud services, tablets, and mobile phones from an ever-growing number of threats.

Security Assessment Services– VA & PT, Forensic etc & ISec Graded Audit.

"For a Neutral, Unbiased and Independent Snapshot of your ITES Systems"

All Information System/Information Technology components especially internet-facing systems and applications carry security risks. Security professionals across the globe generally address these security risks by Vulnerability Assessment & Penetration Testing (VA & PT). The VA & PT is an offensive way of defending the cyber assets of an organization. As we know, Security Assessors could be one of the biggest threats to the service taker. And thus, need to be tracked before and after their engagement. To us, local security assessors are the best option in this regard. For your confidence, we, as core security service provider, engage professional with prior clearance.

Feature of the Product

- We engage experts with prior clearance.
- We use multiple Licensed Tools for conducting Security Assessment- VA & PT and Forensic.
- For effective and efficient service, we engage us for "Follow Up Activities" (if any).
- Provide Hands on Skill Development Training by using multiple Licensed VA & PT Software.

Benefits of the Product

- To comprehensively identify, classify and analyze known vulnerabilities.
- Recommending the right mitigation actions to resolve the security vulnerabilities discovered.
- Testing organization's security policy compliance and employees' security awareness.
- Assessing the effectiveness of the security measures that are present on the target system.

Highlights

- First empaneled Security Assessor firm- Security Audit, under CCA, Ministry of ICT, Bangladesh.
- First Bangladesh Based Security Assessor Firm (PCI QSA) especially for PCI DSS since 2013.
- Business Association with UK & Canadian Based ISO Accreditation/Certification firm.
- Authorized Training and Testing Center (EC Council and Pearson Vue).
- Authorized for Swift Audit and Consultation.

Standard & Certification
(ISO Consultation, Gap Remediation & Accreditation)

"Great things happen when the world agrees"

A standard is a repeatable, harmonized, agreed and documented way of doing something. Standards contain technical specifications or other precise criteria designed to be used consistently as a rule, guideline, or definition. Any organization can establish standards for internal or external use. Based on international Best Practice, Central Bank (Bangladesh Bank) and Ministry of ICT's instruction; organizations are to adopt the international standard framework for proving its effort towards further securing the IT Enabled Systems and Services.

Feature of the Product

- Information System Management Standard – ISO 27001 (ISMS).
- Quality Management System – ISO 9001 (QMS).
- IT Service Management System – ISO 20000 (ITSM).
- Business Continuity Management System – ISO 22301 (BCM).
- Information Security Risk Management System – ISO 27005 etc.

Benefits of the Product

- It ensures the quality of the product/Services.
- it ensures product/Services reliability in the eyes of its consumers.
- Ensures the promise of a business enterprise.
- Boost sale of the organization.
- it will push you closer to the top of the list when in competition with other companies to get a certain customer or client.

Highlights

- Adoption of ISO 27001 has the mandate of the Bangladesh Bank and Ministry of ICT, Bangladesh.
- Full support for making Technical Documentation
- Business Association with UK & Canadian Based ISO Accreditation/Certification firm
- Proven track on successful implementation of various ISOs and assistance in achieving the ISOs.

Standard & Certification
(Payment Card Industry Data Security Standard - PCI DSS)

Are we simply trying to check the box or are we truly trying to protect our organization and the customers?

The Payment Card Industry Data Security Standard (PCI DSS) is a set of requirements intended to ensure that all companies that process, store, or transmit card data (debit/credit) of major brands including Visa, MasterCard, American Express, Discover, JCB also nexus card maintain a secure environment. PCI DSS is set as required component by Central Bank of Bangladesh since 2015 by its ICT Security Guideline (enforcement deadline was 31 December 2018). As the first Bangladesh based PCI QSA, Right Time Limited directly provides PCI DSS Preparatory Consultation, Gap Analysis, Remediation (including full Technical Documentation), Audit & Certification Services since 2013.

Feature of the Product

- Determine the "type" of PCI DSS compliance your organization needs.
- Determine parties responsible for the ownership of all remediation efforts.
- Seek out products, tools, and services for remediation & end to end Technical Documentation.
- Conducting Risk Assessment, VA & PT (external & Internal) & Submitting AOC, COC & ROC.

Benefits of the Product

- To increase controls around cardholder data to reduce credit card fraud via its exposure.
- Giving attestation through required validation of ongoing compliance to be performed regularly.
- Assist for fulfilling the compliance requirement set by PCI SSC, USA; Central Bank (Bangladesh Bank) and instruction of Ministry of ICT, Bangladesh.
- Assisting in securing enterprise/organizational ITES by adopting PCI DSS as best practice.

Highlights

- First Bangladesh Based Qualified Security Assessor firm (PCI QSA) by PCI SSC, USA since 2013.
- Proven track on successful implementation & Certification of PCI DSS.
- Awareness and Implementation Training is conducted by PCI QSA (enlisted in PCI SSC, USA)

Call Center Solution

Next Generation Phone

MetroTel boasts the most state-of-the-art IP Telephony Infrastructure featuring virtually unlimited subscriber capacity, smooth interconnection, voice/video clarity. The whole infrastructure is N+1 redundant ensuring 99.999% uptime and fully secured by SBC (Session Border Controllers) against the attack of any form. The whole service is backed by the most sophisticated, intelligent data network of MetroNet covering most areas all over Bangladesh.

MetroTel bolsters unmatched IP Telephony team comprising experienced skilled engineers, professional customer support team as well as intelligent marketing team ensuring smooth solution and service matching your requirements.

Feature of the Product

- Prepaid and postpaid call plan.
- Connected to all the major IPTSP's.
- National and International call capability.
- Connected to all the ANS operators.
- Connected to BTCL.
- 24/7 call center with trouble ticket management system.

Benefits of the Product

- Utilizes existing IP infrastructure and accommodates all sorts of communication hence reduces capital expenditure.
- Very competitive call rate to all operators also MetroTel-to-MetroTel free call tariff reduces operational expenditure significantly.
- Flexible service (number of channels/connections) can be delivered virtually instantly.
- Minimum deployment time compared to other PSTN operators.
- Service generally not interrupted due to rain, thundering etc.

Highlights

- Standard SIP-based Desktop or Wifi IP Phone.
- Standard SIP-based ATA (Analog Telephony Adapter).
- Desktop SIP phone like X-lite, Zoiper, 3CX, and other standard sip-based application software.
- Mobile phones SIP clients running on Android, iOS, Symbian can also be used for MetroTel service.

Calling Bot - An Automated Calling Solution

It makes calls for you, with intelligence in your need.

Calling bot is an automated calling solution. that can be integrated with many different operations and monitoring systems, listen to the log files, and make calls based on the configured events. Thus it can completely replace a manual calling process or agent(s) and save a certain amount of human cost also beings efficiency in the overall process.
It can be implemented in a telco/IT network operation center, any billing system, any notification/information broadcasting system, customer service system, or any other system where series of manual calling takes place. Calling bot can connect with any system and process by providing API.

Feature of the Product

- Fully automated makes thousands of calls 24X7.
- Unlimited channels can call in parallel.
- Tells what it needs to tell. Not a prerecorded voice, but it generates voice in real-time.
- Calls as per given rules (Time, Recipient, Status).
- Analytical reports on recipients' performance and CDR.

Benefits of the Product

- Eliminate humane involvement cost.
- Optimize process and brings efficiency
- Data analytics gives clear visibility of the operation
- Super flexible in terms of scalability
- Unmatchable in terms of large number call requirements

Highlights

- Implemented in top telco and network operation in Bangladesh
- Strong technical support for operation and customization
- Strong compliance with network and information security
- Flexible to different deployment mode(standalone, cloud, hybrid, SaaS)
- Tested in a global environment.

Reverie Corporation Limited

Reverie Corporation came across a long path in the IT industry in Bangladesh. Reverie first started serving both local and global end-users by developing games and apps on both the Android and iOS platform. Over time, Reverie is now a well-reputed place for developing apps and games for both local and international clients as well. From the beginning, Reverie focused on the quality of the product over the quantity. An excellent pool of highly skilled, talented and experienced tech people made it possible not to compromise with the standard and quality of the product through working in collaboration with a team of young, dynamic and futuristic entrepreneurs in Bangladesh.

School Management Software

INFOSOFT VALLEY LTD
Trusted IT solution
ইনফোসফট ভ্যালি লিঃ

"Trusted Digital Solution"

Besides the obvious of it being a complex piece of computer software, School Management Software is an administration tool for educational institutions. This classification comes from the fact that this type (or category) of software aims to help educational organizations in their daily routine, by automating administrative tasks. "School management software" is also known as a "School management system" or a "Student information system". These systems provide functionality from applications and class enrollment to detailed performance monitoring and financials.

Central Biometric Verification and Monitoring Platform

CBVMP

It was vital for Bangladesh Govt. through BTRC to protect the misuse of the Mobile Phone in the Identification process as well as to identify the user of the mobile phone for being involved in any illegal activities using a mobile phone. BTRC then introduced the Central Biometric Verification Monitoring Platform to map all the mobile phone users with their National ID, Driving License, Passport, and Birth Certificate through Biometric Verification before any sim registration, deregistration, and transfer or replacement. Synesis IT was selected to develop the CBVMP Application; procure, supply, install and integrate necessary hardware, software and connectivity to maintain CBVMP solution.

Feature of the Product

- Centralized Database System.
- Clustered Database Application and mirror database.
- Applications are distributed in multiple application servers using Load Balancer.
- Data Center (DC) is performing as Active and Disaster Recovery (DR) as in passive mode.
- Sufficient dedicated Storage Area Networks (SAN) are deployed in both DC and DR.

Benefits of the Product

- Instant and Centrally verification of NID and other identification documents
- Keeping all the data record against each NID and mobile number
- Aligning all Commercial Mobile Phone Operators (CMPO) in a single platform enabling central platform consent (OTP) before selling or registration activity of any SIM
- Developed and Maintaining high security for public data
- Migration of Big data more than 160 million records

Highlights

- It can identify each citizen with biometric verification
- Real-time data verification with 500 requests per second.
- Effective means to ensure national security through monitoring, identifying, and policy implementation
- 1.4 lacs Daily average registration and de-registration
- More than 260 million registered SIM.

Electronic Tax Identification Number (e-TIN)

e-TIN

The National Board of Revenue launched the first online-based e-TIN registration system in 2013. The project was implemented by Synesis IT Limited. E-TIN is the only country's online certificate acceptable for all official purposes. It is the first government-approved online automated digital certification platform in the country. About 5 million taxpayers have already completed e-TIN registration online. Anyone using their national identity card can easily register and receive a tax certificate online. The e-TIN Helpdesk was also established to help people with TIN registration. The helpdesk has so far helped more than 5.5 lakh taxpayers in e-TIN registration.

Feature of the Product

- Fully automated web-based tax registration and certification generation system
- Instant verification of NID data for Authenticity
- The automatic rule for circle and jurisdiction
- Comprehensive tax payer's database
- Integration system with 3rd party

Benefits of the Product

- Save the valuable time of the taxpayer with the self-registration process.
- Help desk (Call Center) for any kinds of TIN related help
- Instant verification of NID and RJSC documents
- No chance of fake TIN issuance with digitally signed 12-digit unique TIN Number
- 3rd party verification is easier and faster.

Highlights

- A fully automated centralized TIN registration system.
- Government-approved first digital certificate.
- First online project for direct online citizen service doorstep.
- More than 50, 00,000 TIN registration since inception.
- Average 50,000 TIN registration every month.

Development and Implementation of an Integrated e-Bill Payment System (EkPay)

EkPay is a centralized e-Payment System or a P2G (People to Government) platform. The ultimate goal of the payment system is to reach 5- 'any': anybody, anywhere, anytime, any payment, and finally any- government service. This service is Providing citizens of Bangladesh the convenience of paying any utility or other bill, anywhere and anytime. Thus, reduce the TCV (Time-Cost-Visit) of the bill payment process.

Feature of the Product

- A secured payment processing platform for all public services which is facilitating the collection of payments through multiple channels.
- This project covers utility bill payments such as electricity, water, gas; all education board payments, all e-filing & forms portal payments, and all Digital Center payments.
- Providing interoperability so that citizens can pay the bills of any service provider at a single point and facilitate payments via multiple channels i.e., Cash, Debit Cards, Credit Cards, Prepaid payment instruments including wallets and other electronic payment options, etc.
- Provide an accessible bill payment system to the large segments of the unbanked and under-banked population.

Benefits of the Product

- Provide citizens of Bangladesh the convenience of paying any utility or other bill, anywhere and anytime. Thus, reduce the TCV of the bill payment process.
- Provide a simpler process of bill collection for service providers/billers. Also, give billers the ability to have a complete and transparent picture of the payments.
- Provide access to all possible payment points for the bill payers.
- Reduce the massive dependency on paper printing for the payment processes and record-keeping thus take Bangladesh one step closer to the vision of 'Digital Bangladesh'.
- Provide a higher level of security and accountability to both billers and bill payers.

Highlights

- Centralized e-Payment System
- Simpler process of bill collection for service providers/billers.
- Interoperability
- Secured payment processing platform.

Online GD Lost and Found Service Software

Bangladesh Police is the premier law enforcement agency that has made efforts to digitize the services and preserve related data and strengthen its ICT infrastructure for enhancing the efficiency and effectiveness of the organization. DMP now intends to automate the entire process of GD filling that will not only enable the complainant to fill GD online and receive a verification code (QR) for the GD but also receive a soft copy of the GD certificate online without paying a physical visit to the police station. The project was initiated by Bangladesh Police and was implemented by Synesis IT.

Feature of the Product

- Online GD Service
- Lost & Found Service
- Mobile App
- Service Monitoring Dashboard and Reporting
- Fast, secured and transparent system

Benefits of the Product

- SMS/Email notification service for the status update of different stages of a GD service.
- Complainant tracking & service status online.
- Online dashboard service for the concerned police station and higher authority to monitor the progress in real-time.
- Service to download and print the GD copy by verifying complainant information.
- A central database for all the lost and found cases will be maintained by the police department

Highlights

- The system has Integration with NID Database
- A mobile app with which clients can easily download and file complaints.
- Web & mobile compatibility from PC/Laptop/Tab/Mobile with internet connectivity.
- A proper track record of all the complaints and service status online.

CSL SOFTWARE RESOURCES (CslSoft)

The present CslSoft started its operation as a software department of CSL (Computer Solutions Ltd.). In the year 1985, the promoters had the vision and philosophy to create an environment within the country where the local resources in a team will produce state-of-art world-class software products for the country and as well as for the international market. With the growing need for customized software, the team also started growing in its number of members. With the same leadership, the initial transformation was made from a department of CSL to an independent company called CSL SOFTWARE RESOURCES (CslSoft), in the year of 1996. And later in 1998, it was incorporated as a 100% software development private limited company.

Track My Vehicle

bondstein

Connect your vehicle to the internet

Track My Vehicle brings the most robust vehicle tracking solution with all advanced control features available in the telematics industry to solve local problems. Using this product, customers can see where their vehicles are moving via a dashboard built on the web & mobile application. It also lets the user explore historical movement data on a map, remotely turn off the vehicle's engine by simply turning on the remote engine disarm feature from the panel & obtain more than 24 analytical reports consisting of data on mileage, location, alert on the dashboard. Our panel is powered by visual graphics so that it is easier for any user to understand driving trends. To make the system integration convenient, we have developed the platform in a way that lets our clients directly patch their vehicle data to their ERP through our API. This platform also lets a user track expenses behind their vehicle. Our platform is built with predictive maintenance alerts needed for the vehicle based on its usage. We have a 24 hours call center support & experienced range of technicians to provide such support all over the country.

Feature of the Product

- Powered by Bondstein-IoT Cloud
- Explore from any device through multiple native platforms

Data Center & Cloud Service.

Helping Partners Modernized Faster.

MetroSky is a fully automated cloud service platform launched by MetroNet Bangladesh Limited. It brings buyers and sellers to conduct business on a single platform. Rather than building out a comprehensive and multi-layered infrastructure, reseller can leverage the pre-built, flexible platform to purchase, provision, manager and invoice technology solutions for their end- user customer.

MetroSky makes it really easy to deploy, run and scale applications. Set up an environment in few seconds; deploy, scale, install and integrate add-ons in a snap. Focus on your job, deliver faster, work happier.

Feature of the Product

- Cisco UCS, DELL Blade servers and SSD storage guarantee performance and reliability and also allow a true high performance, enterprise architecture without any compromise.
- Built on a massively redundant architecture with no single point of failure, multiple clustered hardware and high-end blade servers, we have leveraged our know-how in delivering a platform designed to scale and grow while maintaining industry leading uptime.
- A fully redundant Cisco UCS and DELL network links all nodes providing blisteringly fast network throughput, internet access and storage access.

Benefits of the Product

- Resources Pooling
- On-Demand Self-Service
- Easy Maintenance
- Large Network Access
- Automatic System
- Pay as you go

Highlights

- Economical
- Availability
- Security
- Load balancing
- Auto Failover

PRO-EDGE ASSOCIATES

On-Line Compensation Information Services (CIS)

Valuing your people, the right way

Our online Compensation Information Service (CIS) provides clients with detailed compensation analyses and support. The cloud-based C&B survey helps organisations unravel increasingly complex compensation information to find the insights organisations need to make pay decisions that support business goals. To deliver on this promise we collect data and evaluate job roles using a tested methodology. This enables clients to make in-depth compensation comparisons—across job functions and industries. The system is made easy for clients to access the database and pinpoint critical decision-making insights through our cloud-based reporting and analysis tools. We perform custom studies to address specialized client issues or needs.

Feature of the Product

- Online access to compensation database through the subscribed portal
- Customized survey capability
- Comprehensive Compensation & Benefits database
- Reward Benchmarking
- Online custom report creation

Benefits of the Product

- Detailed Market Analysis
- Detailed Standard Statistical Analysis
- Powerful Reporting and Analysis
- Availability of a range of percentile as required for your organization
- Reliable Compensation Benchmarking of benchmark jobs

Highlights

- Cloud-based secured database maintaining the confidentiality of all participating companies
- Selection of companies based on organisation type, population, budget, and number of employees
- A single snapshot of salary benchmarks for all your positions
- Access to information 24/7
- Quick and efficient search technology with report generation at own time, pace and frequency Results are exported in a clear graphical format

IT
Infrastructure

Remote Monitoring Solution

Advanced Power Monitoring Solution

Remote power generator monitoring solution helps our customers to monitor load consumption on their generators remotely. It enables them with clear visibility of their operations. Through this solution, we provide load analytics, voltage parameters, and current flow status over a secured cloud network. This solution is widely used in rental generators. It also helps to provide a transparent billing timeline to the clients. It also tracks the vibration of the generator and can provide predictive maintenance information based on the generation vibration. Now our customers are able to connect their generators to the internet and bring it right under their fingertips.

Feature of the Product

- Robust IoT hardware with advanced GSM modules
- Multiple sensors to pick the right state of activity
- Direct activity tracking on the map
- Power management on the cloud
- Dynamic cloud listing of active directory

Benefits of the Product

- Live activity tracker
- Cloud monitoring solution
- Audited analytical reports
- Save operational cost
- Consumption management capacity

Highlights

- Nationwide support services
- Robust IoT hardware with extended warranty
- Operational cost audit trail

CSL SOFTWARE RESOURCES (CslSoft)

The present CslSoft started its operation as a software department of CSL (Computer Solutions Ltd.). In the year 1985, the promoters had the vision and philosophy to create an environment within the country where the local resources in a team will produce state-of-art world-class software products for the country and as well as for the international market. With the growing need for customized software, the team also started growing in its number of members. With the same leadership, the initial transformation was made from a department of CSL to an independent company called CSL SOFTWARE RESOURCES (CslSoft), in the year of 1996. And later in 1998, it was incorporated as a 100% software development private limited company.

Mobile Application & Games

Tic Tac Toe Glow

Play Tic Tac Toe Free!

Play Tic Tac Toe on your phone. No need to waste paper to play puzzle games! Our new modern version appears in a cool glow design.
The AI for this puzzle game is the best you will see. It adapts to your play style and is highly unpredictable. Unlike other Tic Tac Toe games on the market, you will always find its AI to be fresh and entertaining. If that is not all the AI skill can be adjusted on the fly in-game. So you can crank up the difficulty while playing or notch it down if you got cornered.

Feature of the Product

- Single and 2 player mode (Computer and human)
- 3 difficulty levels
- glow effects
- One of the best puzzle games in the world.
- 6 other mini-games inside this

Benefits of the Product

- Kids Friendly Game
- Multiplayer game
- Could be played with friends/family (2 player mode)
- adaptive AI

Highlights

This game was worldwide featured twice in the Google play store, once in Amazon & Opera app store.

Debug BD
Innovating a better tomorrow

Game Changer

Change the game

"Fantasy sports" is a game of skill where participants assemble imaginary teams of real world players for an upcoming real life match. However, in this process, the fantasy sports players need to demonstrate their understanding of the game, read the matches, find the best fit of players for the team within resource limitation and then win. It comes from experience, intelligent thinking, skills, and understanding of the game. It is almost like you are a Football Manager or Selectors Committee of a cricket team.

Feature of the Product

- Fantasy Cricket
- Fantasy Football
- Casual Games
- Tournament long fantasy format

Benefits of the Product

- Healthy entertainment opportunities
- Create awareness about local athletes
- Stress reliever
- Possible of extra side income using your skill to win various games.

Highlights

- Funded by Startup Bangladesh - iDEA Project.
- Selected as best innovative startup of 2020 by Bangladesh Innovation Conclave.
- Bangladesh's oldest fantasy sports platform.

Antennae POS by Sweet iTech

Mobile-based online Point of Sales System

A simple and easy-to-use mobile app, equipped with POS, Inventory, Purchase modules in its entirety, and the basic accounting functionality that can help non-professionals, along with professionals, to keep track of day-to-day sales. The system supports Sales Invoice and Purchase Order generation and follows the regular flow up to Goods Receive Note generation and sale to walk-in customers. Sweet iTech managed to implement IoT concepts by integrating thermal printers and digitally generate PDF reports that can be shared over social networking apps. Controlled access means the admin can overview the complete performance of each salesman in real-time.

Feature of the Product

- Sales Management
- Inventory Management
- Purchase Management
- Employee Management
- Accounts Summary

Benefits of the Product

- Direct Sales can be made through mobile apps.
- There is an option for creating a customer for future sales.
- Effective Inventory Management through Purchase as well as manual entry.
- There is flexibility in the purchase as not only the medicines are to purchase from the companies, they can be purchased from the 3rd party vendor as well.

Highlights

- Fixed and walk-in customer-based sales
- Real-time inventory status and restocking mechanism
- Purchase order generation and wish list maintenance
- Goods Receive Note and payment tracking
- Thermal printer and PDF-based reports

> *I think this is the best browser in Bangladesh and also one of the best browsers in the world. This is the only browser that gives you free rewards just using it. You can recharge your phone every day only using it and set it as the default browser. There are so many advantages over other browsers like Live TV, News, videos, Travels, Live Cricket updates, 180 + free awesome games etc. Also, there are many ways to win free vouchers. So undoubtedly it is the greatest browser I've ever seen.*
